

The old red brick staircase of the textile factory was painted with yellow and blue paint, and the paint came off to reveal the original red, which looked like a rainbow. mimics the peeling texture of paint

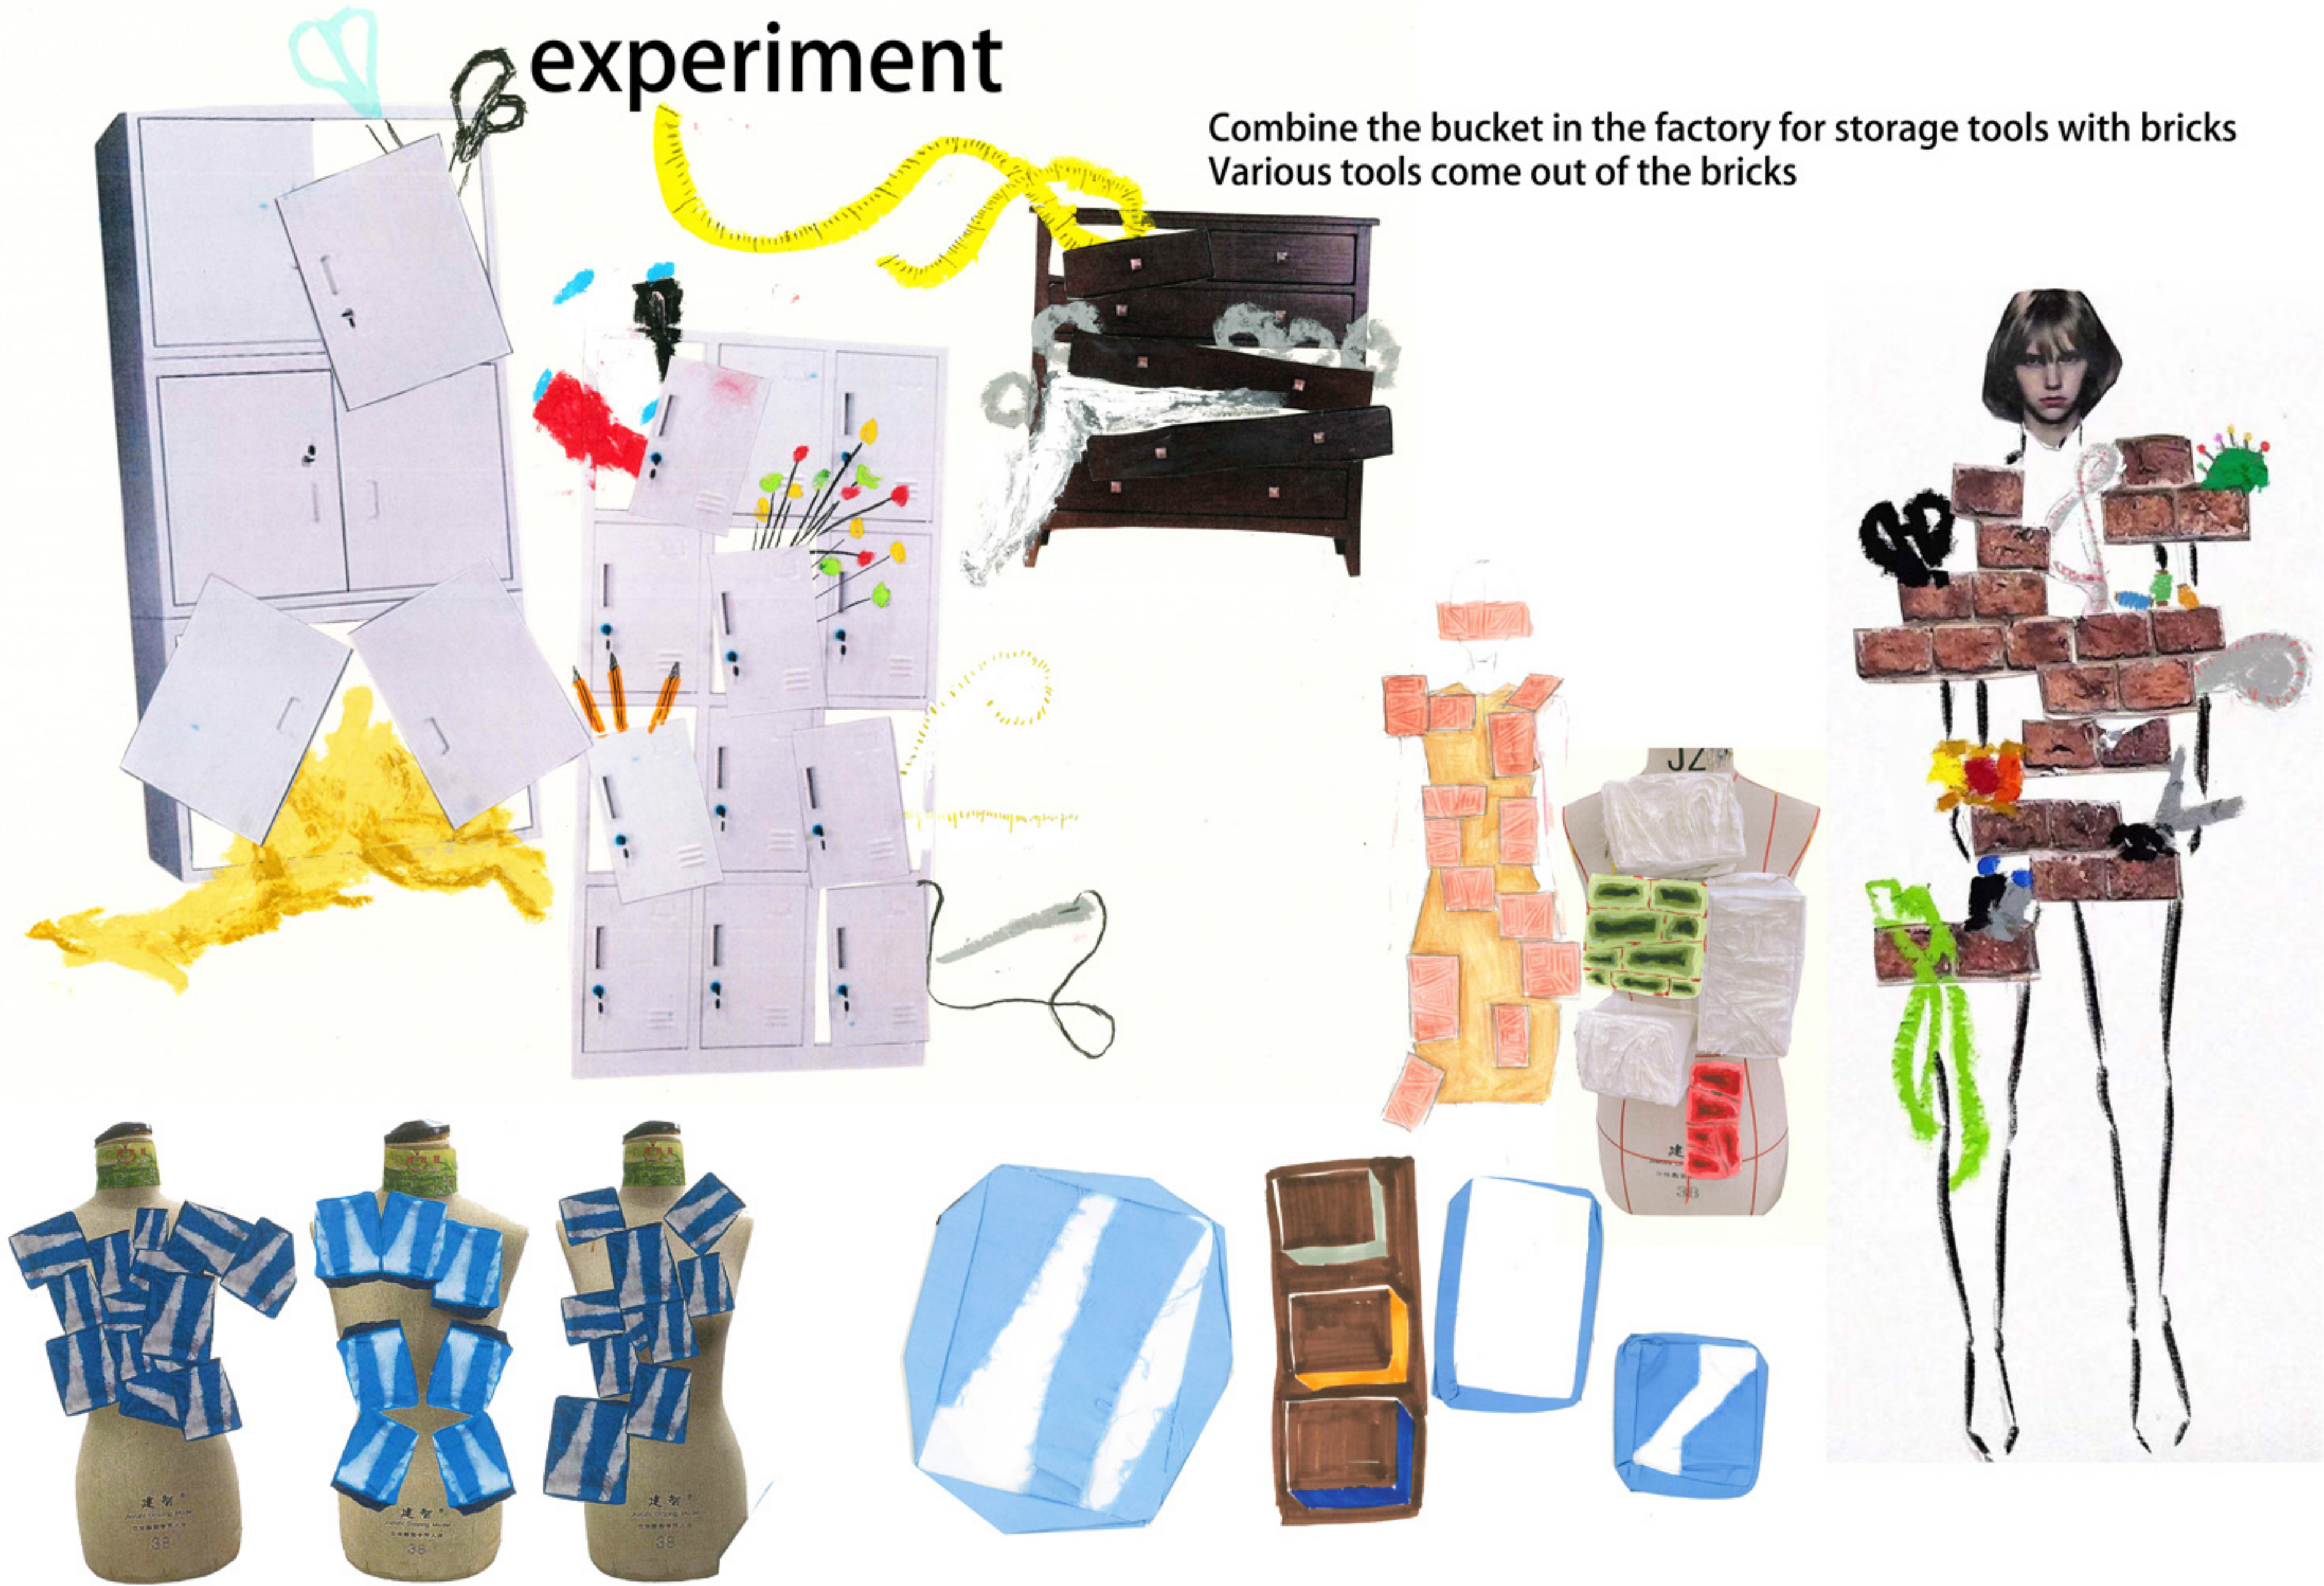

## The old textile factory

Many creative parks in Guangzhou are converted from old factories. This project was inspired by an old textile factory

# experiment

Combine the bucket in the factory for storage tools with bricks  
Various tools come out of the bricks

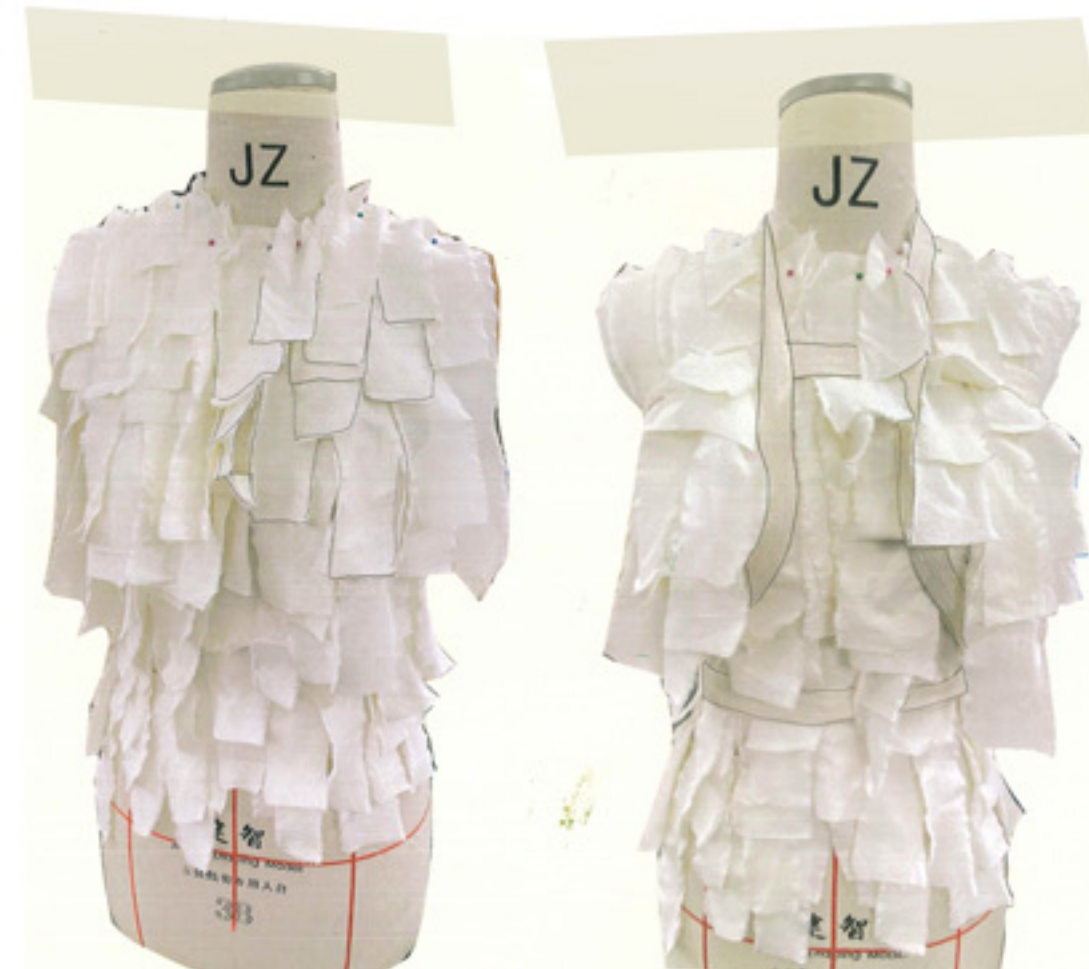

# Research about the budings & textile experiment

he old office building of the textile mill was covered with the outer wall and hidden in the woods

Different styles of leaf exploration

# Further development

Collage of the combination of the trees to the human body  
Stacked cloth strips simulate layers of leaves and cirrus

## Uniform research

## deconstruct a uniform

In the past, working uniforms at textile factories were gray-blue and poorly functional. Both men and women wear the same overalls  
Reconstruct a workshop uniform and lift material

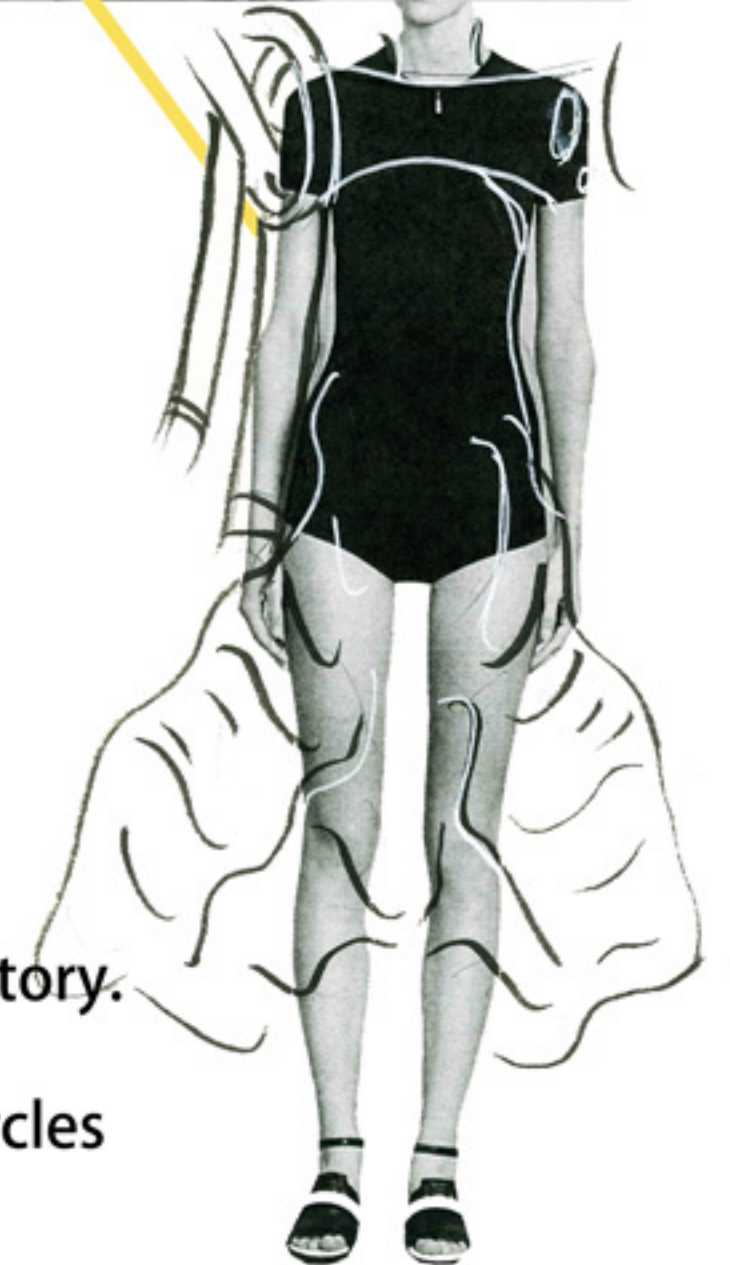

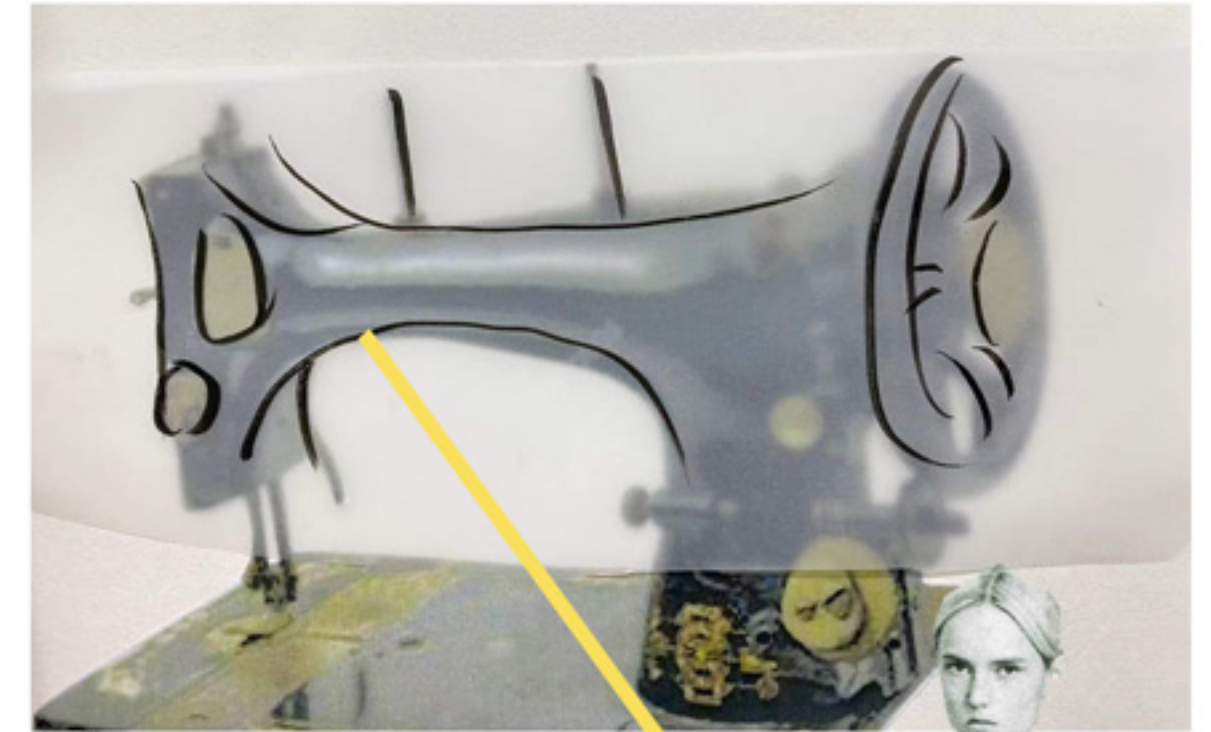

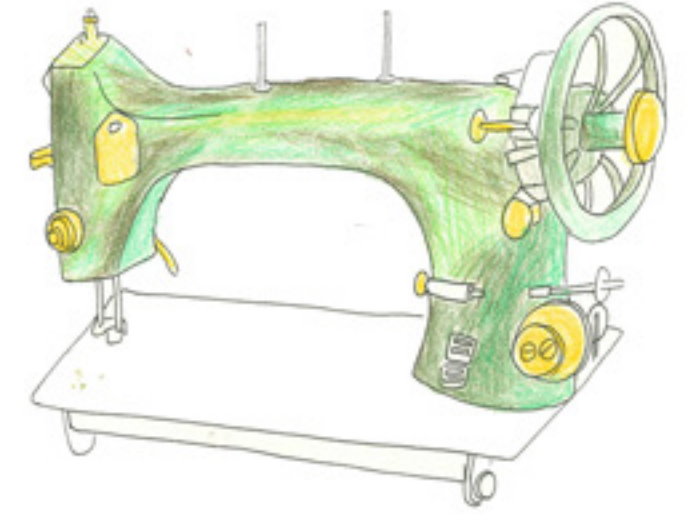

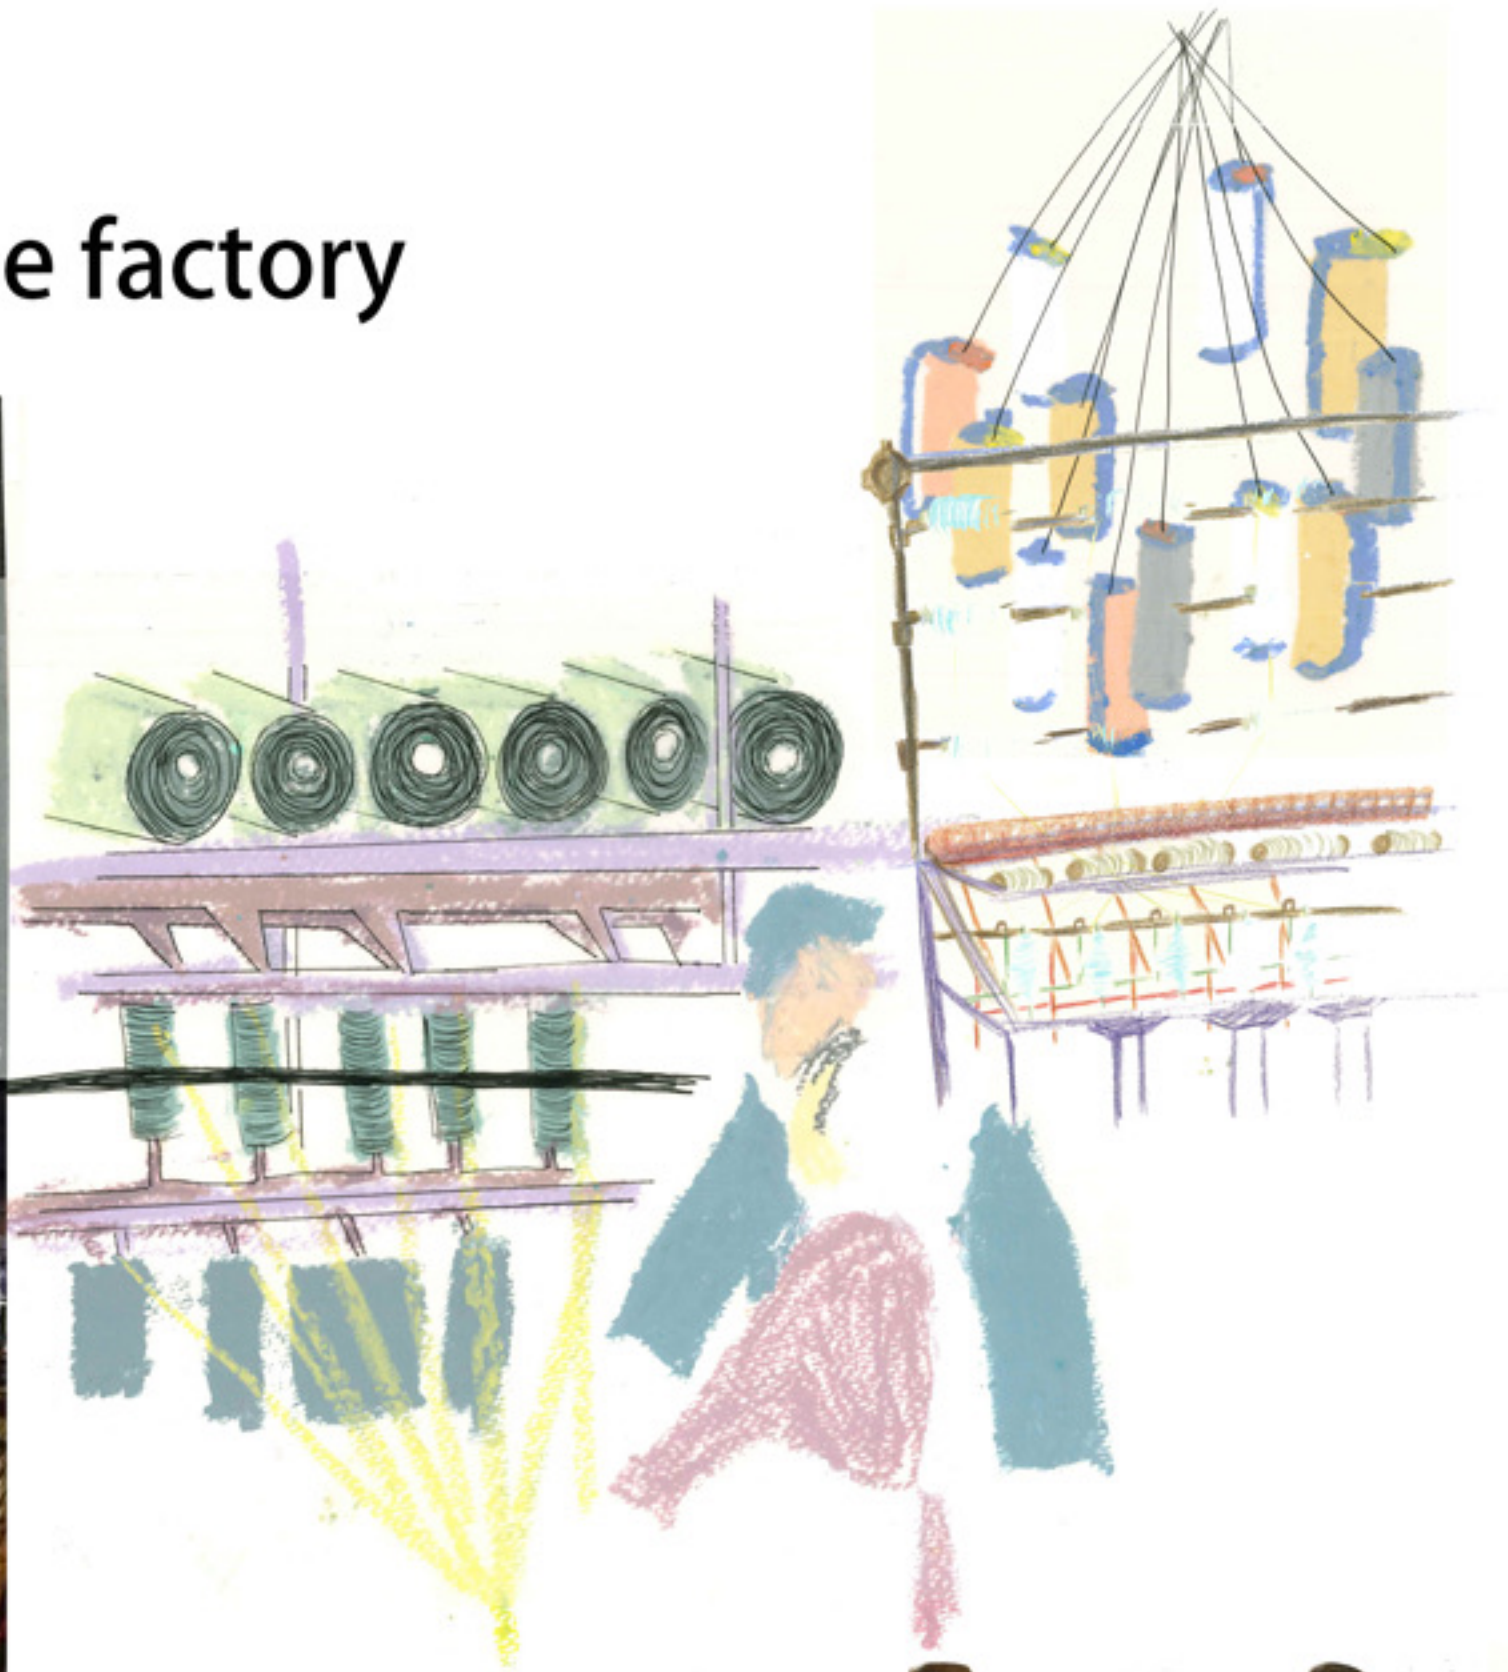

**The shapes and texture on the uniform are all of rainbow stairs**

- 1 There is a sleeve slit and a hook and loop fasteners to stick with one on the arm. The sleeves will not fall after they are rolled up, which can avoid getting wet the sleeves when workers wash things.
- 2 There are two pieces of water-absorbent fabric on the shoulders, which can wipe the sweat on their faces when the workers hands are not free, such as holding a lot of things on their hands
- 3 The chest pocket is made with a diagonal cut, making it easier to take out when square objects such as a mobile phone or licence are inside
- 4 The two pockets under the top are a diamond shape so its easily unzips from no matter which side. For example, something that requires is in the left pocket while left hand is working, the right hand can open the left pocket very quickly without having to bypass it.
- 5 There are also two water-absorbent fabrics at the back of the coat, which they can rub their hands when workers need to dry their hands immediately.
- 6 On the pants, each leg has two drawstring, which can be lifted up and fixed It can help workers to not wet their pants when wading through the water or washing things

# Inside the factory

There are lots of very interesting machines in the factory. Last century machines are full of retro feel. This is the inspiration from the spinning machine, circles are connected together by many lines.

# Futher reseach

A building in the old textile mill was reconverted into very modern buildings, a big conflicting between this building and other buildings that had not been converted  
A fabric created with small pieces of sulfuric acid paper  
The building gave me a very transparent feeling, so I chose the translucent sulfuric acid paper

# Further experiment

The special cloth scissors are different from the ordinary scissors, the shape of the handle I am very interested in. collage about scissors and bodydraping :Scissor handles transform into a shoulder design
