I will establish a family tree in future

reproduction

Reproduction object man, plant, animal, microbe, creatures or abiotic? What other way to reproduce than by mating
Does biological reproduction change over time? Have people's views on reproduction changed over time?

reproductive worship ancient time genitals Prices

Why is the materialization of reproduction worship always genitalia?

Most cultures of fertility worship worship people

Is there a "god" in reproduction worship?

The materialization of people's worship of reproduction is their own thing, which means that what they worship is not god but the reproductive ability of human beings

那么，这种“生殖崇拜”出现的具体原因是什么呢？

一、首先原始社会和古代的死亡率非常高。

在新生儿出生的过程中，女性分娩需要干净无菌的环境，必要的时候还有动用剖腹产一类的手术来帮助分娩。

古代新生儿出生的时候保持环境的干净已经被人们普遍认知。但如果放在原始社会的话，人类根本没有保持环境干净的认知，新生儿出生的环境很恶劣，所以，很多新生儿出生之后不久死亡的可能性非常大。

除了生下来不能活很久之外，原始社会的人类经历了婴幼儿时期，成长为成人，同样会因为医学水平的严重落后，导致原始社会的人类普遍寿命不长，即便是我们现在日常中的小病都很可能导致死亡。

出于死亡率很高的原因，原始社会出现生殖崇拜就是希望通过频繁的生育来让自己的同胞多起来。

There are many conditions that contribute to fertility worship, such as medical standards, human neonatal mortality, and the pain of childbirth

How people's ideas about reproduction have changed over time

性崇拜

←性崇拜

性崇拜或生殖崇拜，是指膜拜生殖器官、生殖和性交等的崇拜活動。性崇拜是人類的原始宗教——自然崇拜的一部分。最早可以追溯到人類的原始社會，即使在現今的不同文化和宗教中仍可見一斑。

由於古代人類不能理解自身的性行為與生殖現象，因而產生了一種神秘感和敬畏的心理。從現今考古學發現中，各古代文化留存下來的神像、圖騰和圖畫中，均可以發現不同形式的性崇拜。性崇拜是生命和創造的象徵，更可細分為三類：生殖崇拜、生殖器崇拜和性交崇拜。^[1]

In ancient times, people associated sex with reproduction

在原始社会时期，人类也经历了无数个发展过程，虽然发展的速度非常缓慢，但是人类在发展的过程中也进一步产生了对生活的认知。

在我国一直流传着“食色性也”的说法，随着人类的认知进一步提高，人们对“性”的了解也越来越深入了。

人们解决了最基本的生存下去的问题之后，因为可供原始人娱乐方式的局限性，所以“食饱思淫欲”的说法放在原始社会也是非常合适的。

出于原始社会各个方面的落后，人们根本没有避孕工具，更不懂得避孕的方法和措施，性生活之后大多数都是以怀孕率很高。

经过了思想认知进一步发展之后的人类，可能有些时候并不是出于繁殖的目的进行性生活，但是，他们的性生活结果却达到了更多的繁衍后代的目的。

A mind map of the cult of reproduction Worship

The relationship between sex and reproduction

Condom

Condoms were created partly because people wanted sex but didn't want to get pregnant

Is the advent of condoms the antithesis of the cult of reproduction?

People want sex, but don't want reproduction

The uterus ring, sterilization

People want to reproduce, not have sex

test tube baby

With the development of science, human reproduction and sex are no longer bound together

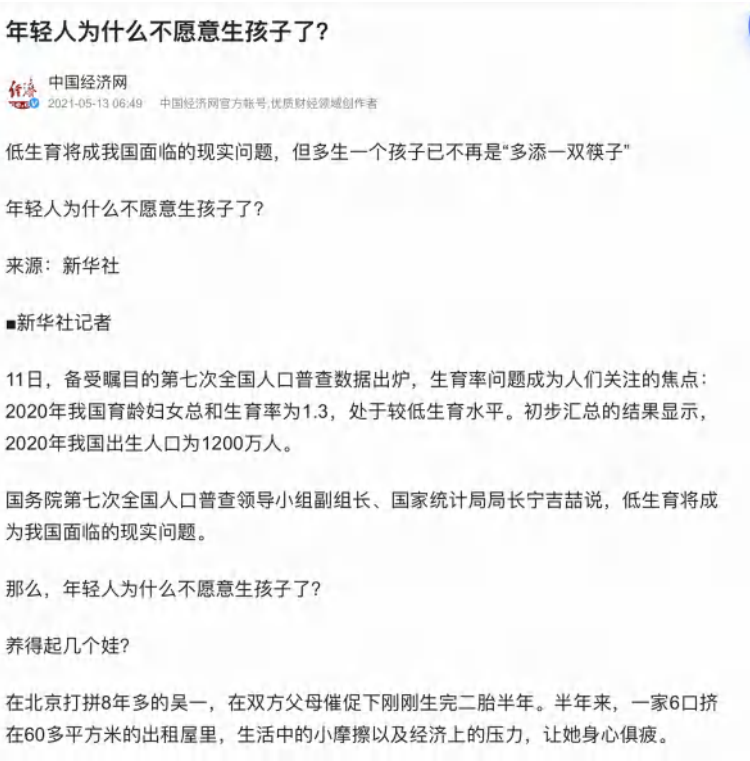

three-child policy

Is reproductive desire low today?
Will there ever be a profession dedicated to reproduce baby ?

Do modern people need reproduction worship to continue the next generation?

Demographic Dividend

The fertility cult is similar to the demographic dividend

People don't want to reproduce anymore?

Will having children become a career? Will this change the human concept of family?

Will this policy create anything new?

Will the status of men and women change? Modern conditions for giving birth

According to a report published by China Economic Net, there are many reasons why modern Chinese have a low birth rate

- 1: Economic pressure
- 2. Women are more educated
For a woman, giving birth to a child will occupy most of her time, not only during the period of childbirth, but also after the birth of a child, most of her time will be taken care of. If a woman has her own career to develop, giving birth to a child will be a blow to her career. If three children basically represent the end of her career.
- 3: The child policy requires women to start bearing children at the age of 20 or older
- 4:After the implementation of the three-child policy, there will be a bigger gap between men and women in terms of promotion. "More senior jobs will be open to men, but more women will be recruited at the grassroots level from a cost perspective
- 5:women's health

What are the benefits of the three-child policy for every family?

- 1、孩子不再孤独，独生子女常常会羡慕有兄弟姐妹的孩子，相信这是很多独生子女都有过的体验，所以家里要是3个孩子，他们的童年便不会孤独，而且还能相互照顾。
- 2、分担抚养老人的责任，在8090人群中，很多夫妻不仅要抚养双方的父母，还有双方的祖父母，不管是精力上还是经济上，所承担的责任都巨大。
- 若每个家庭都3个孩子的话，这样责任可以减轻很多。
- 3、可促进孩子相互进步，家里一个孩子，所有人的爱、关心和注意力都集中大宝身上，长时间就会形成不好的习惯和性格。要是家里有3个孩子，不仅可分散这些爱和关心，还能促进3个孩子相互对比，一起成长进步。
- 4、预防子女发生意外，后继无人。在中国传宗接代是件很隆重、严肃的事情。在现代，因生活环境的污染、各种意外事故的发生、以及自然灾害等失去生命的人数不胜数。不怕一万就怕万一，有3个孩子一旦发生这样的事情，至少不会让人感到绝望。
- 相比较独生子女来说，三胎家庭一般孩子们在成长的过程中并不会感到孤独，几个孩子可以玩耍着长大，而且父母老了之后也能分担养老的责任，因此有条件的话生三胎还是很好的。

Personally, I totally disagree

Forced birth

experiment1 — — — — — 21世纪崇拜反生殖雕塑

Sperm can drill condoms like a drill

totalitarian

Force? It's more of a struggle between man and race, individual and collective, to have children or not to have children.

Is this saving the human race? But who was saved? No one wants contraception to fail

Is there no fertility cult in the 21st century?

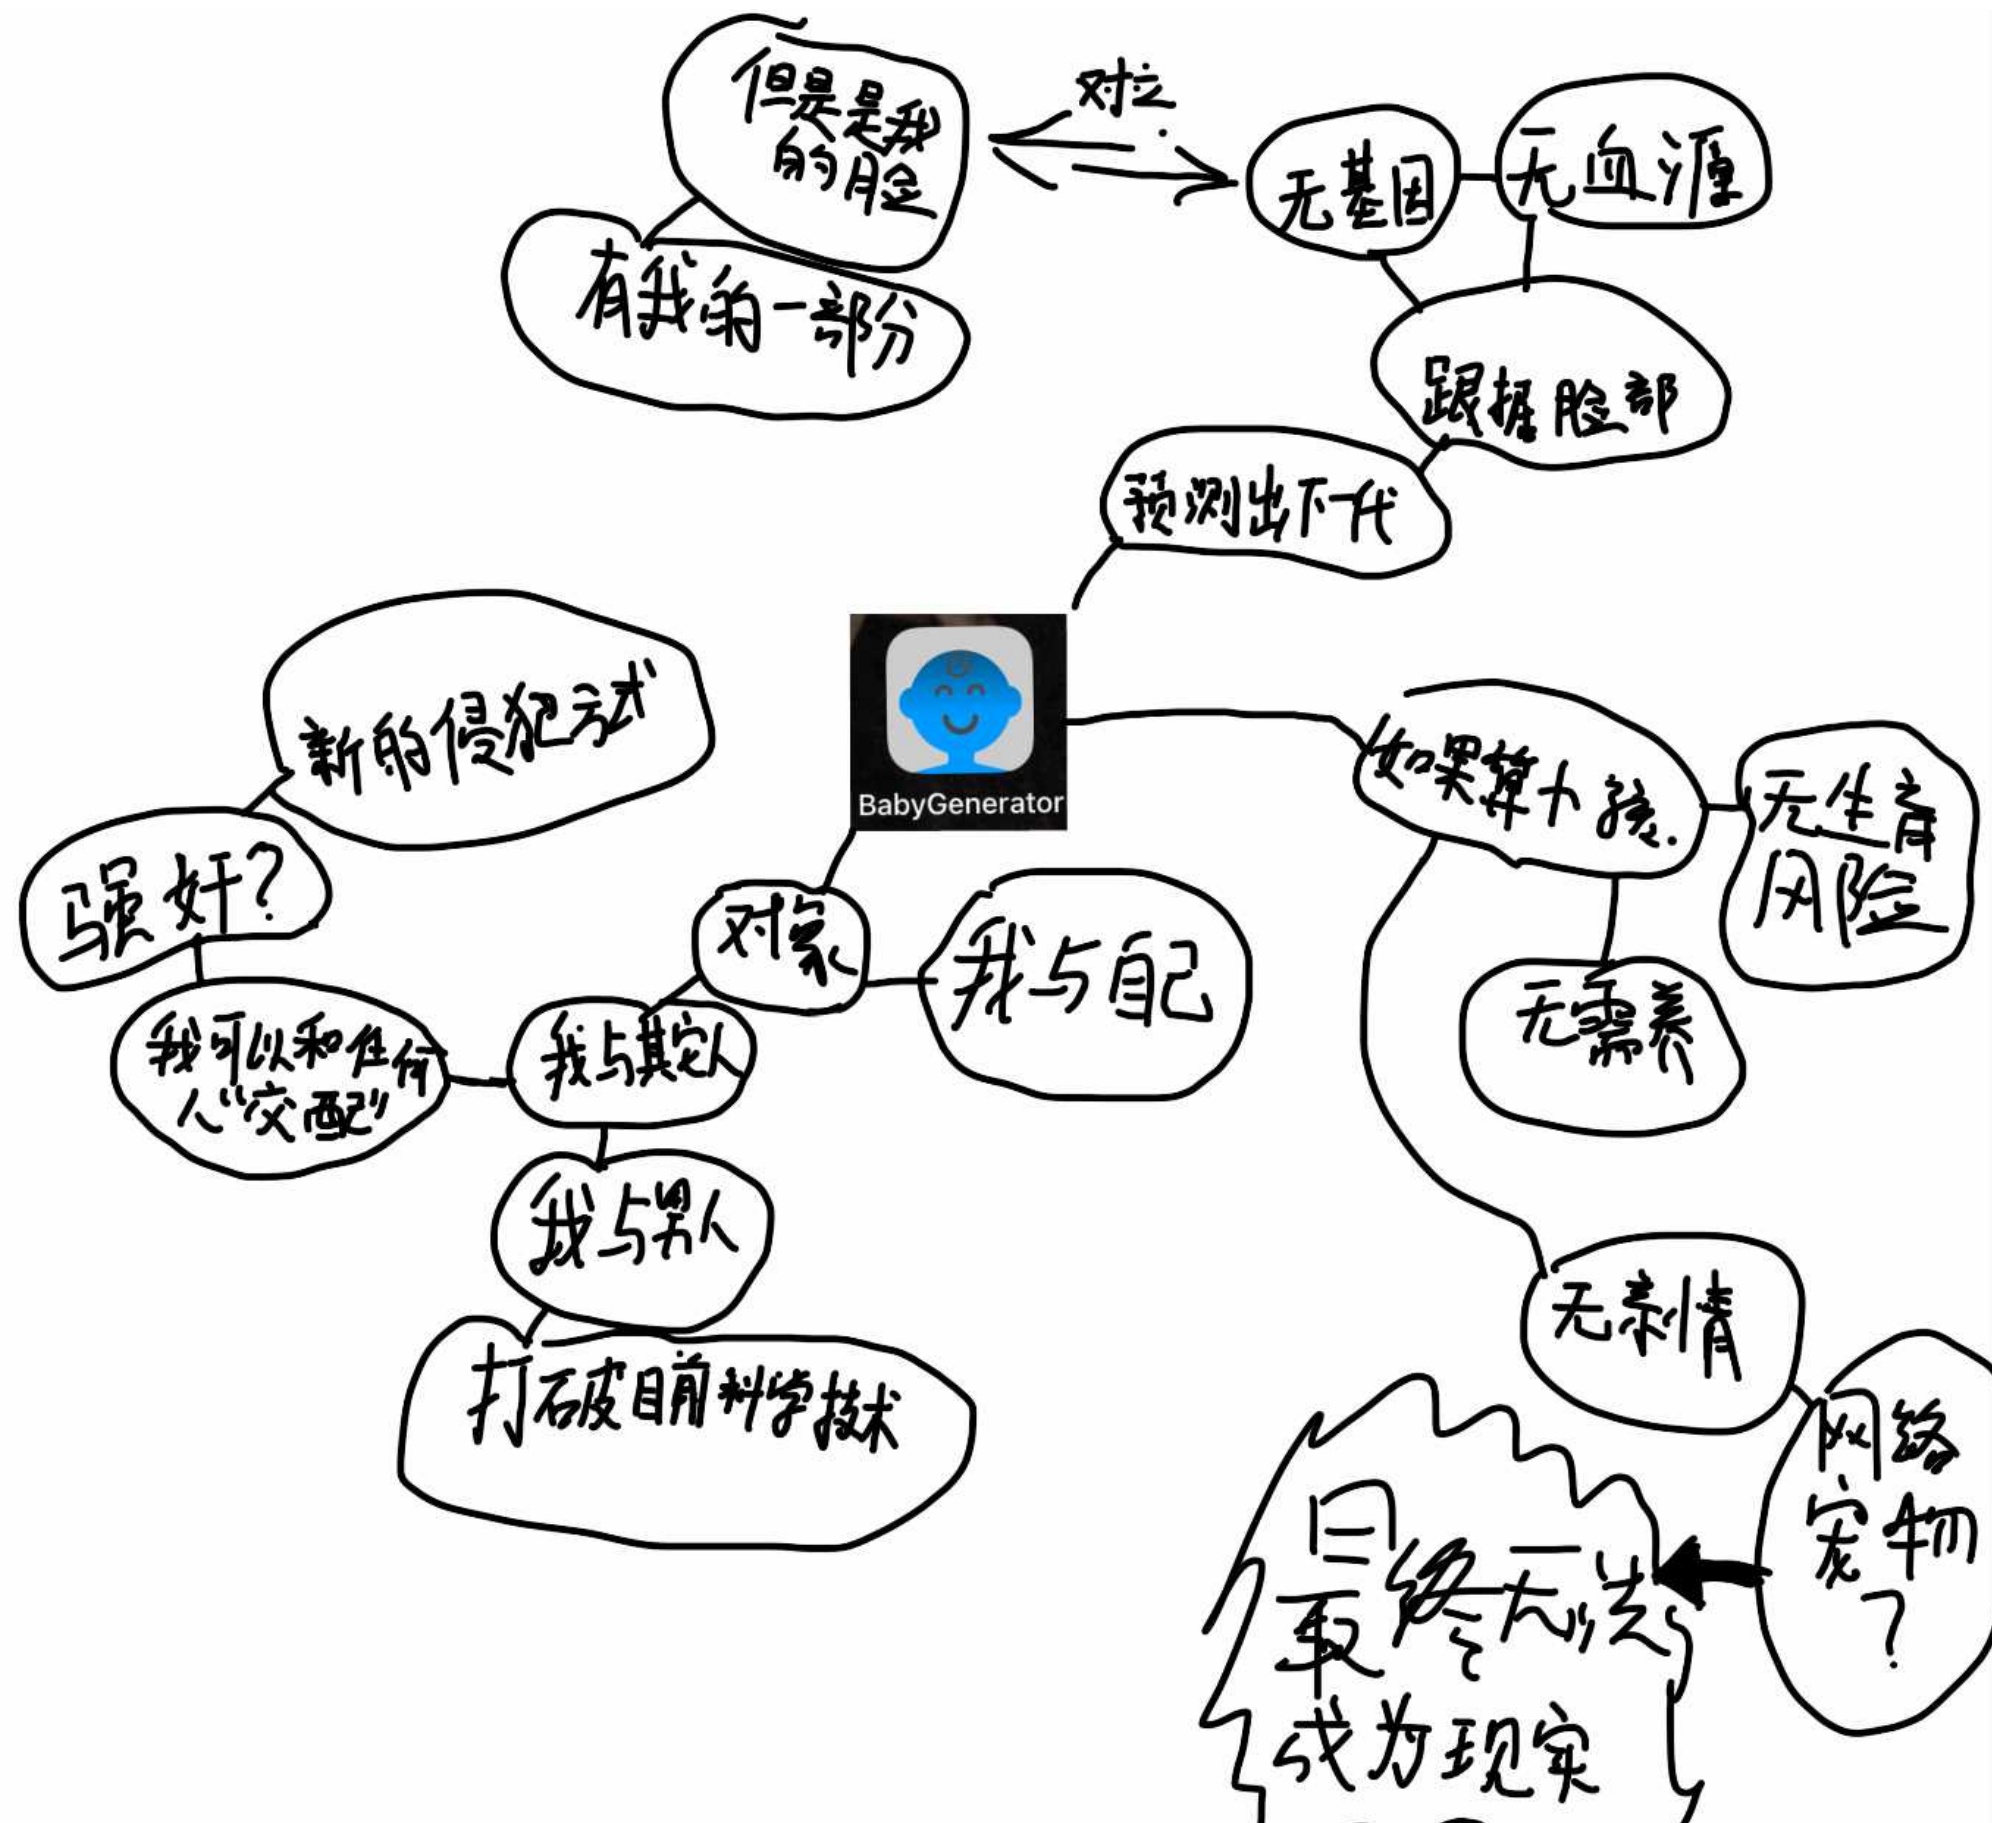

Will humans continue to reproduce?

What if people have children and raise them for free, for free, or even for free?

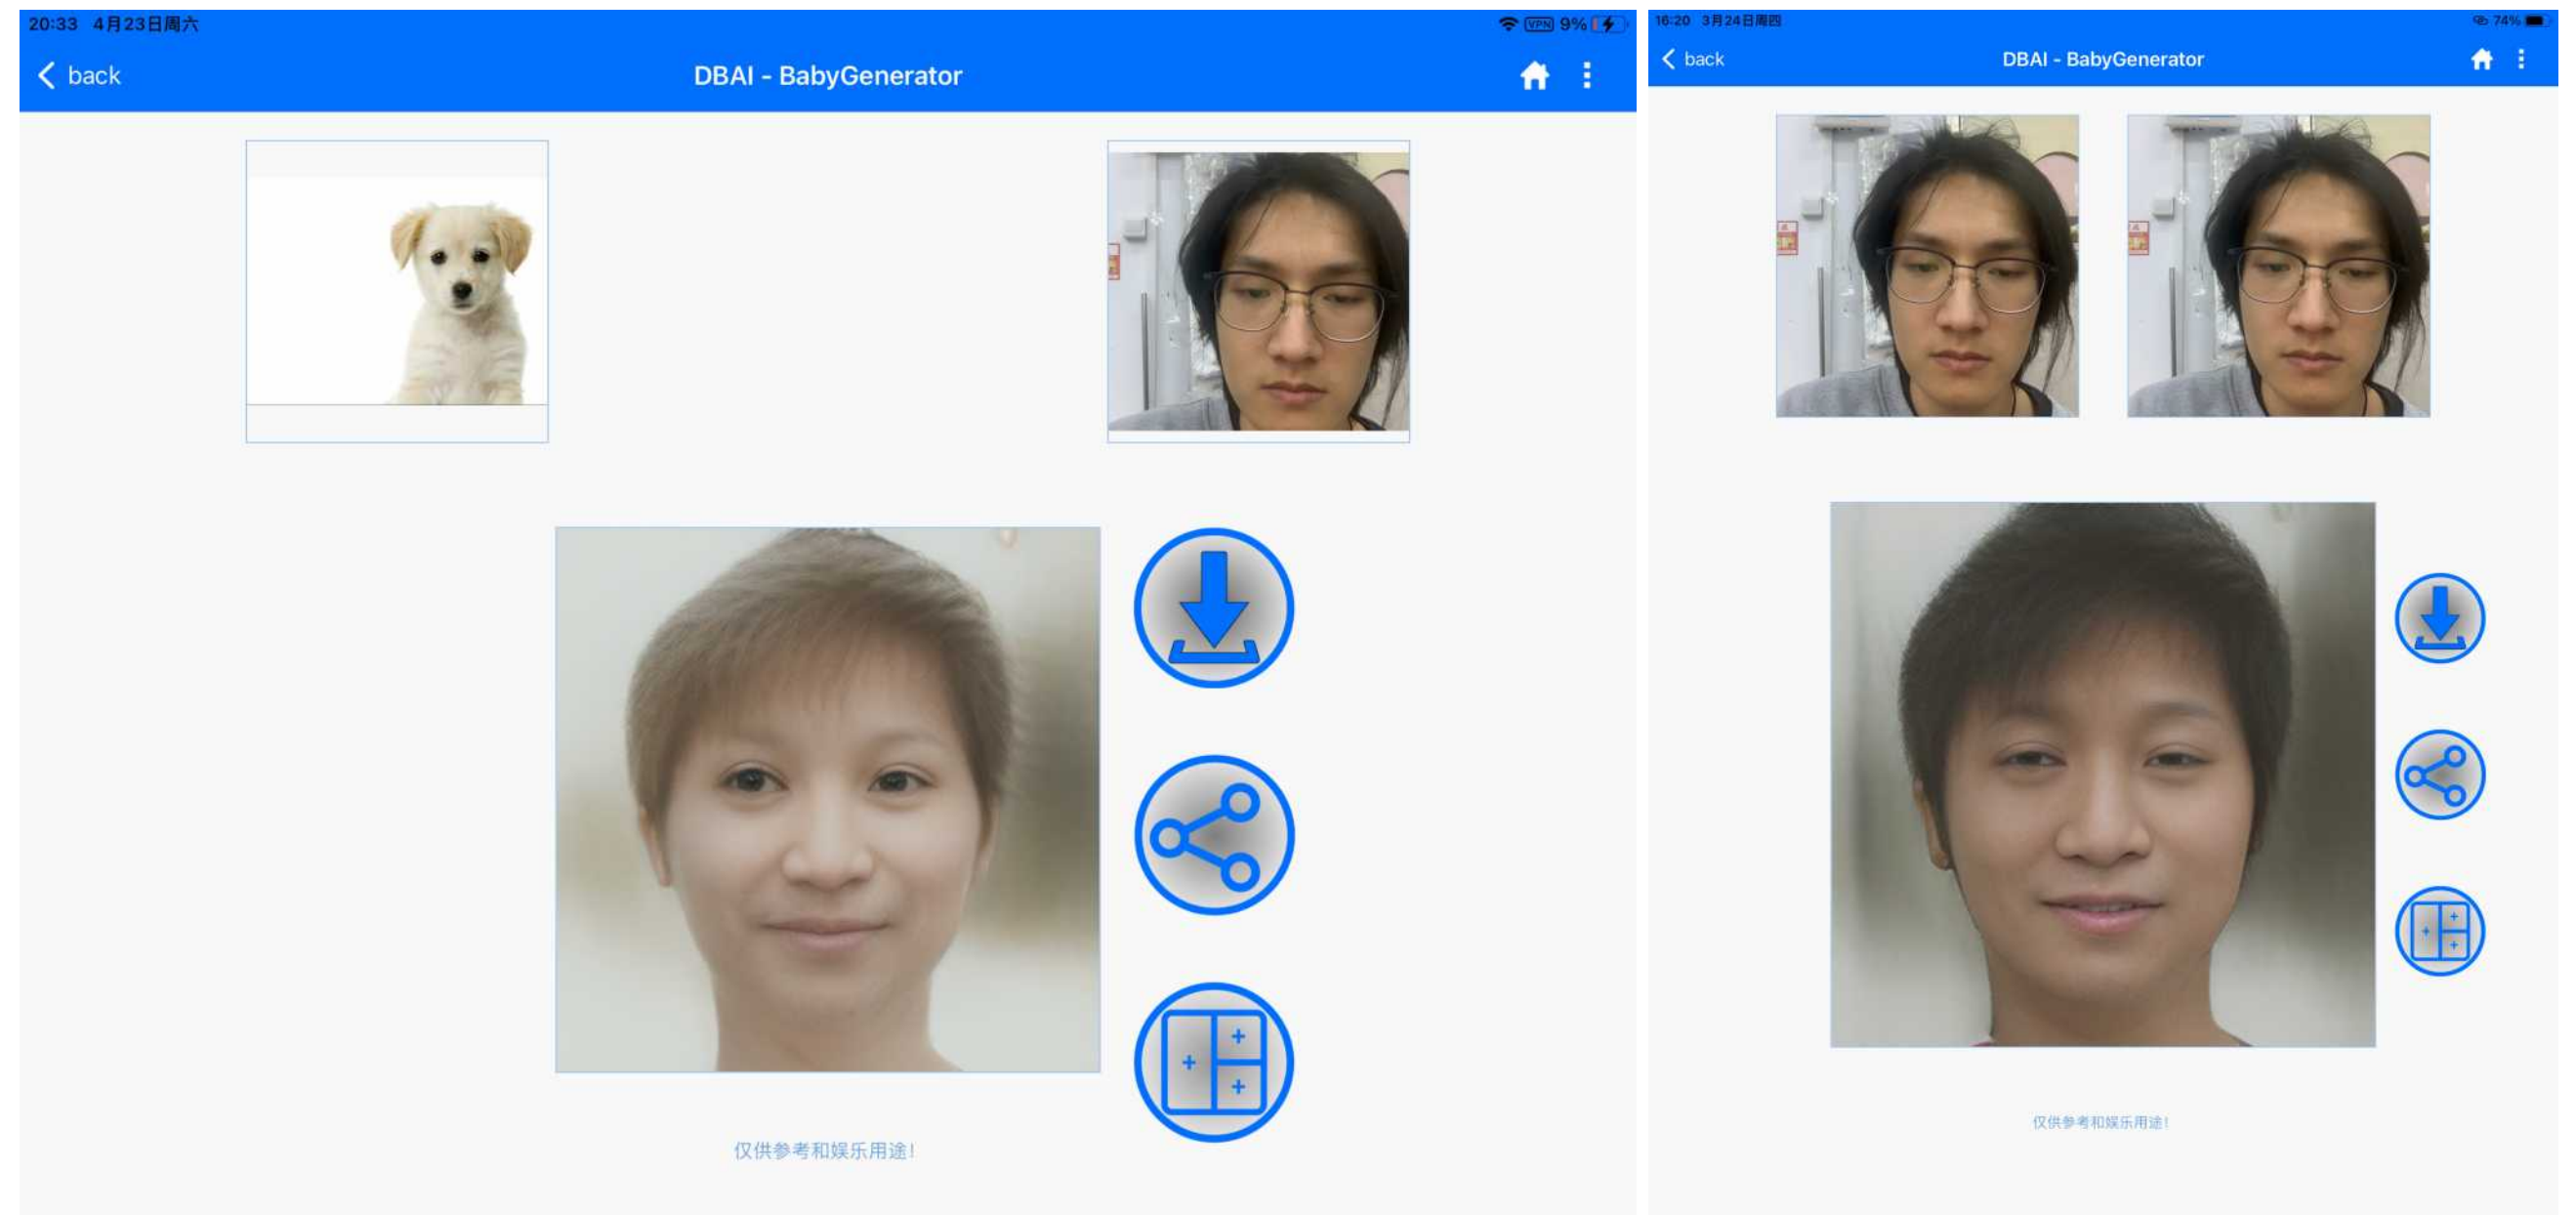

In this childbirth software, if the image produced is the same as birth, will the human become want to have a baby?

Some thoughts on this software

Try a variety of breeding objects

With animals

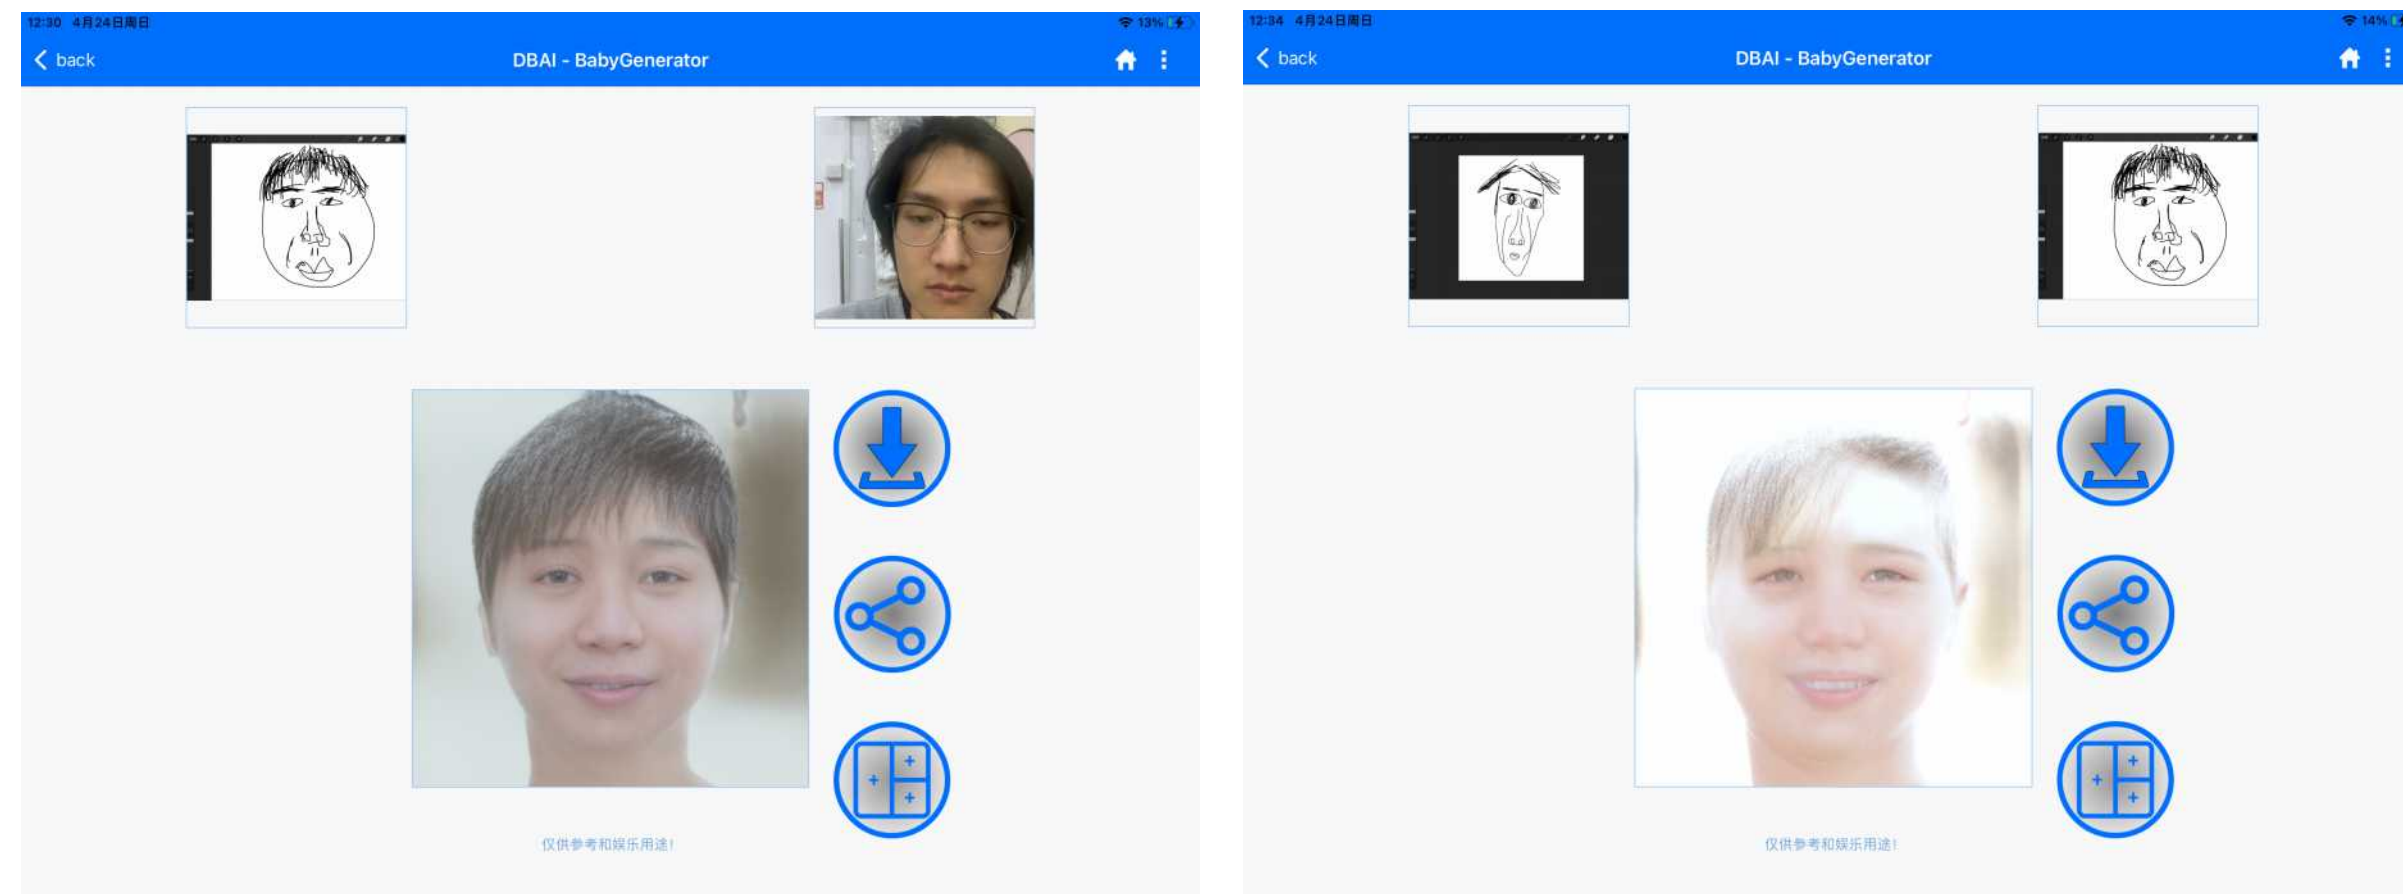

With my self

- No fertility risk?
- Do not need to raise?
- No emotion?
- Like cyber pets?

But there's no denying that the things that are generated have a piece of me

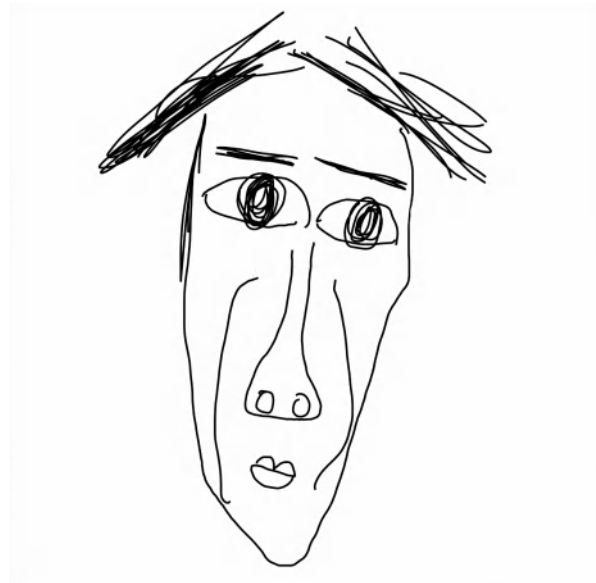

**Did some of the above assumptions never materialize?
How to define reality?**

Experiment 1

I copulate with my own drawings

Paint with paint

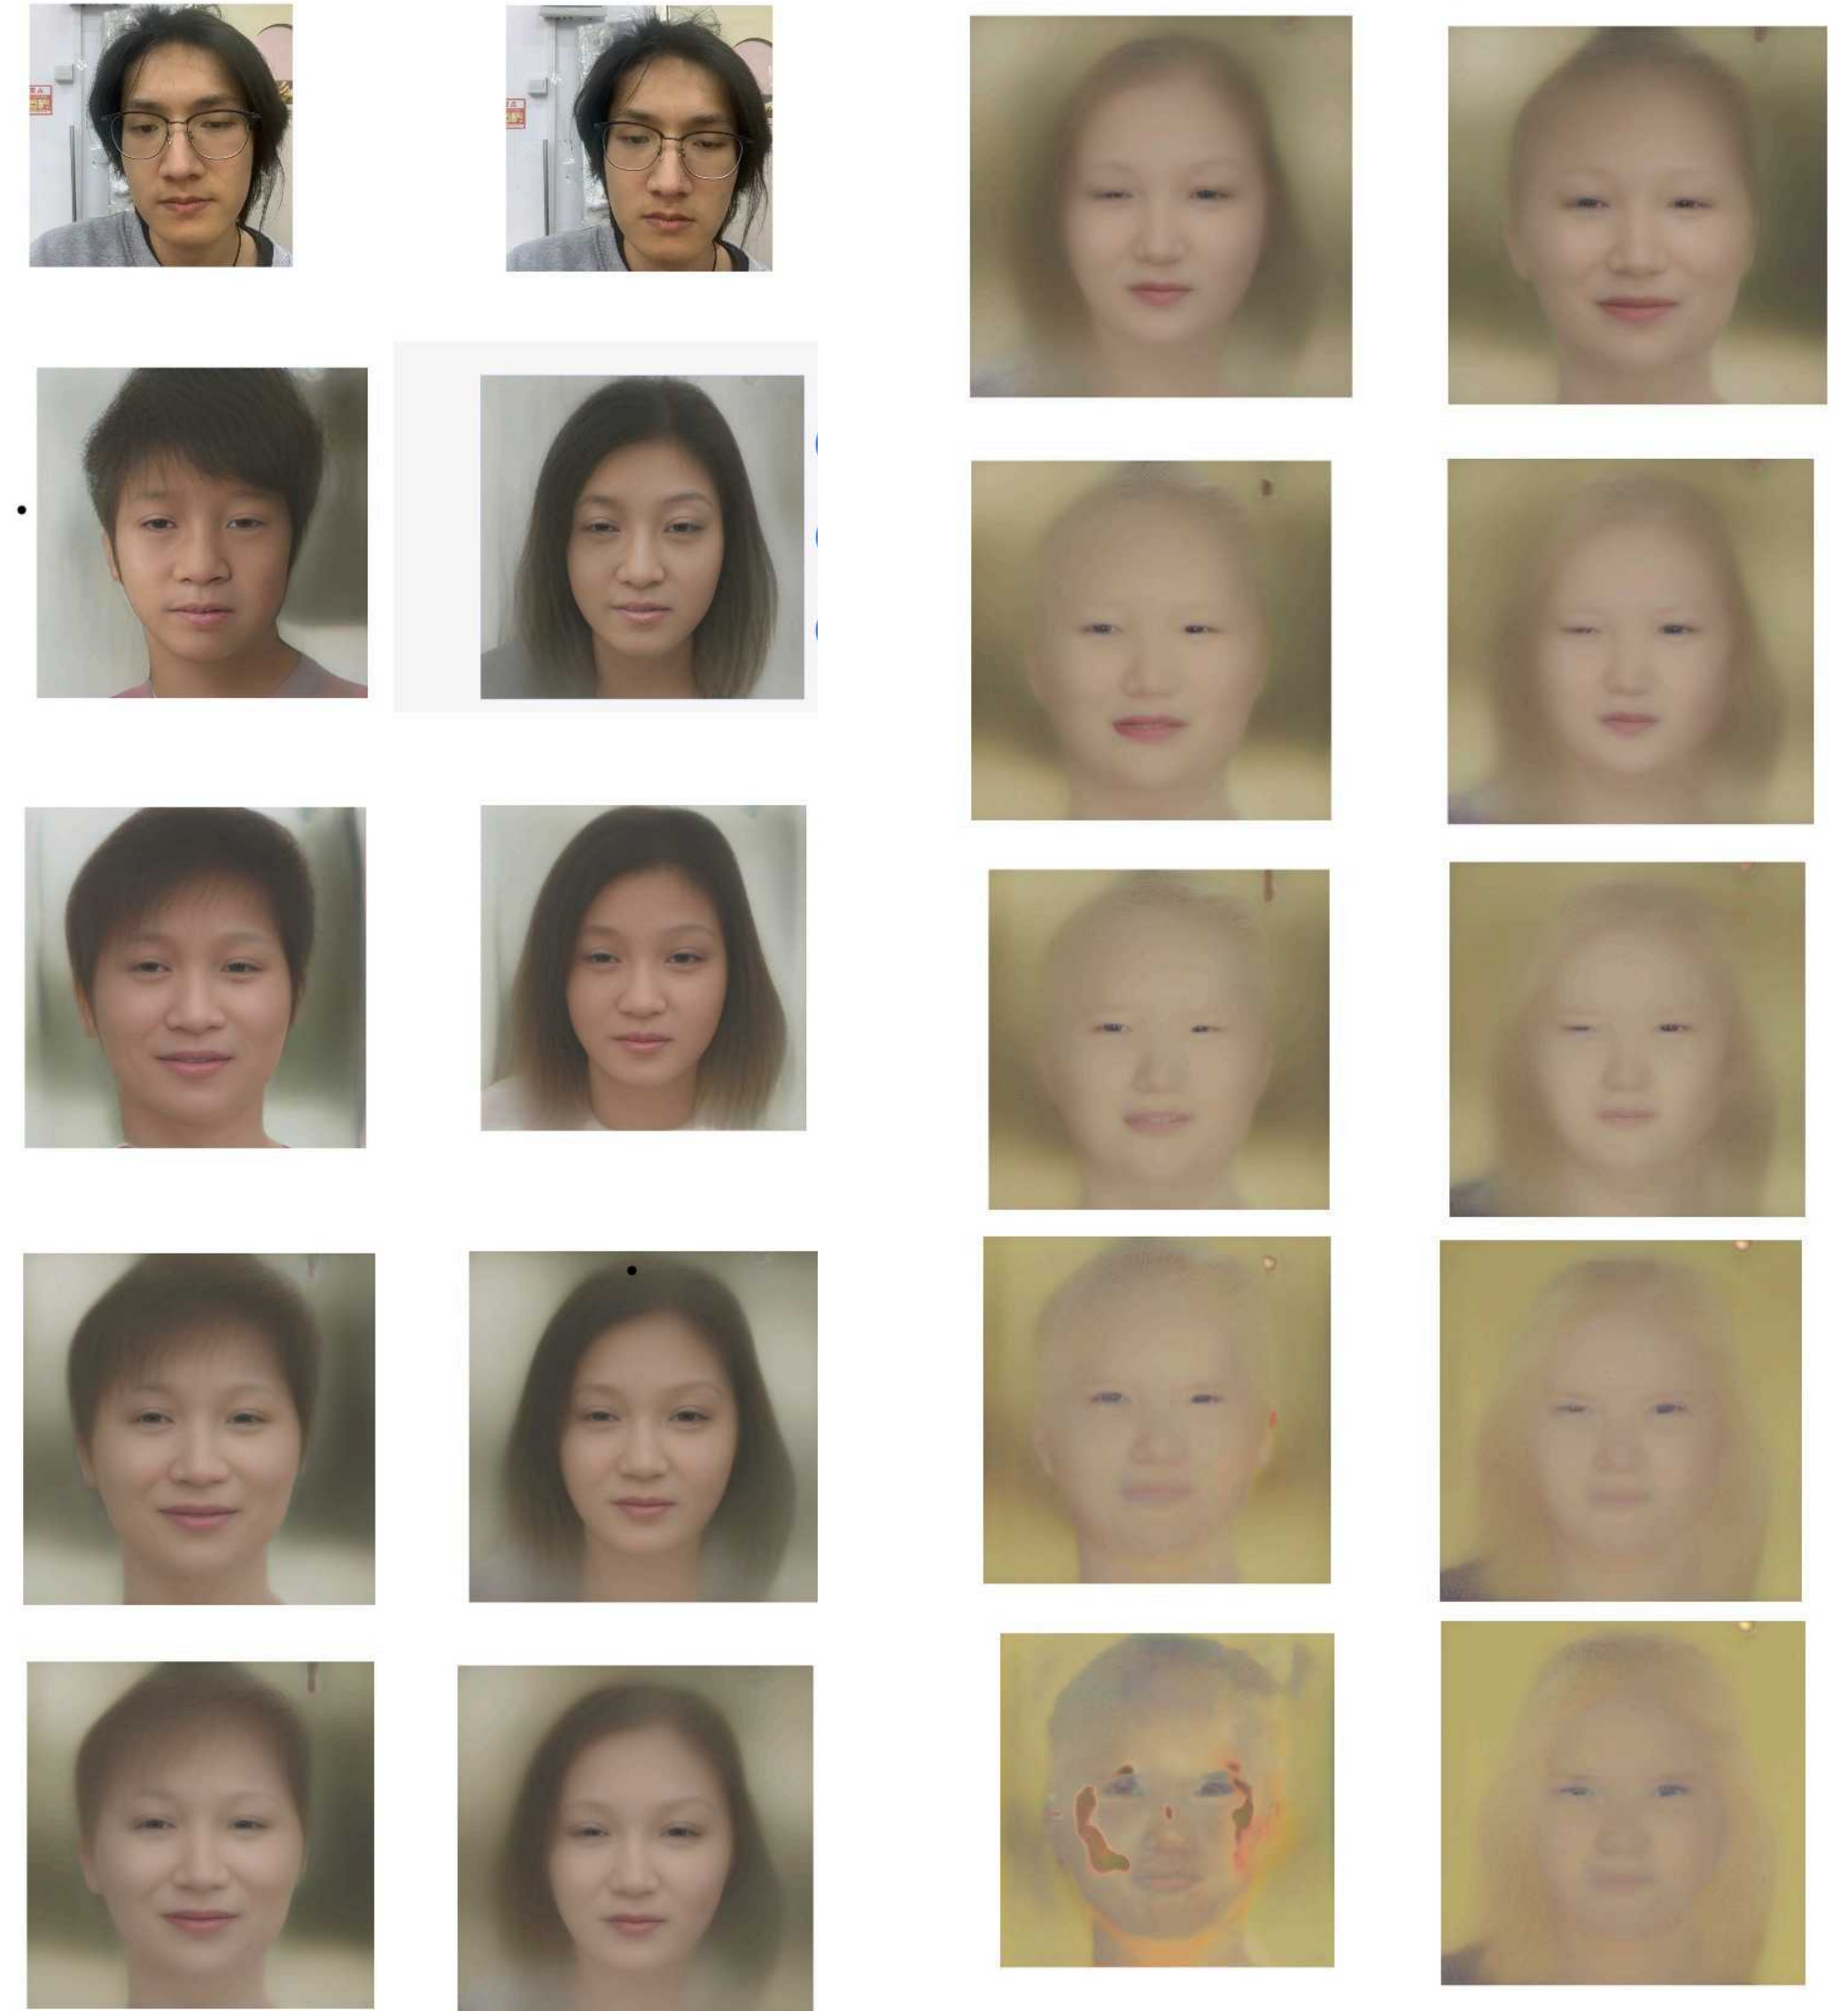

Portraiture seems to me to be "a creature in a plane". Is the mating in this plane integrated with the painting?

Fall short

So no matter how abstract I draw it, I still end up missing people

Experiment 2

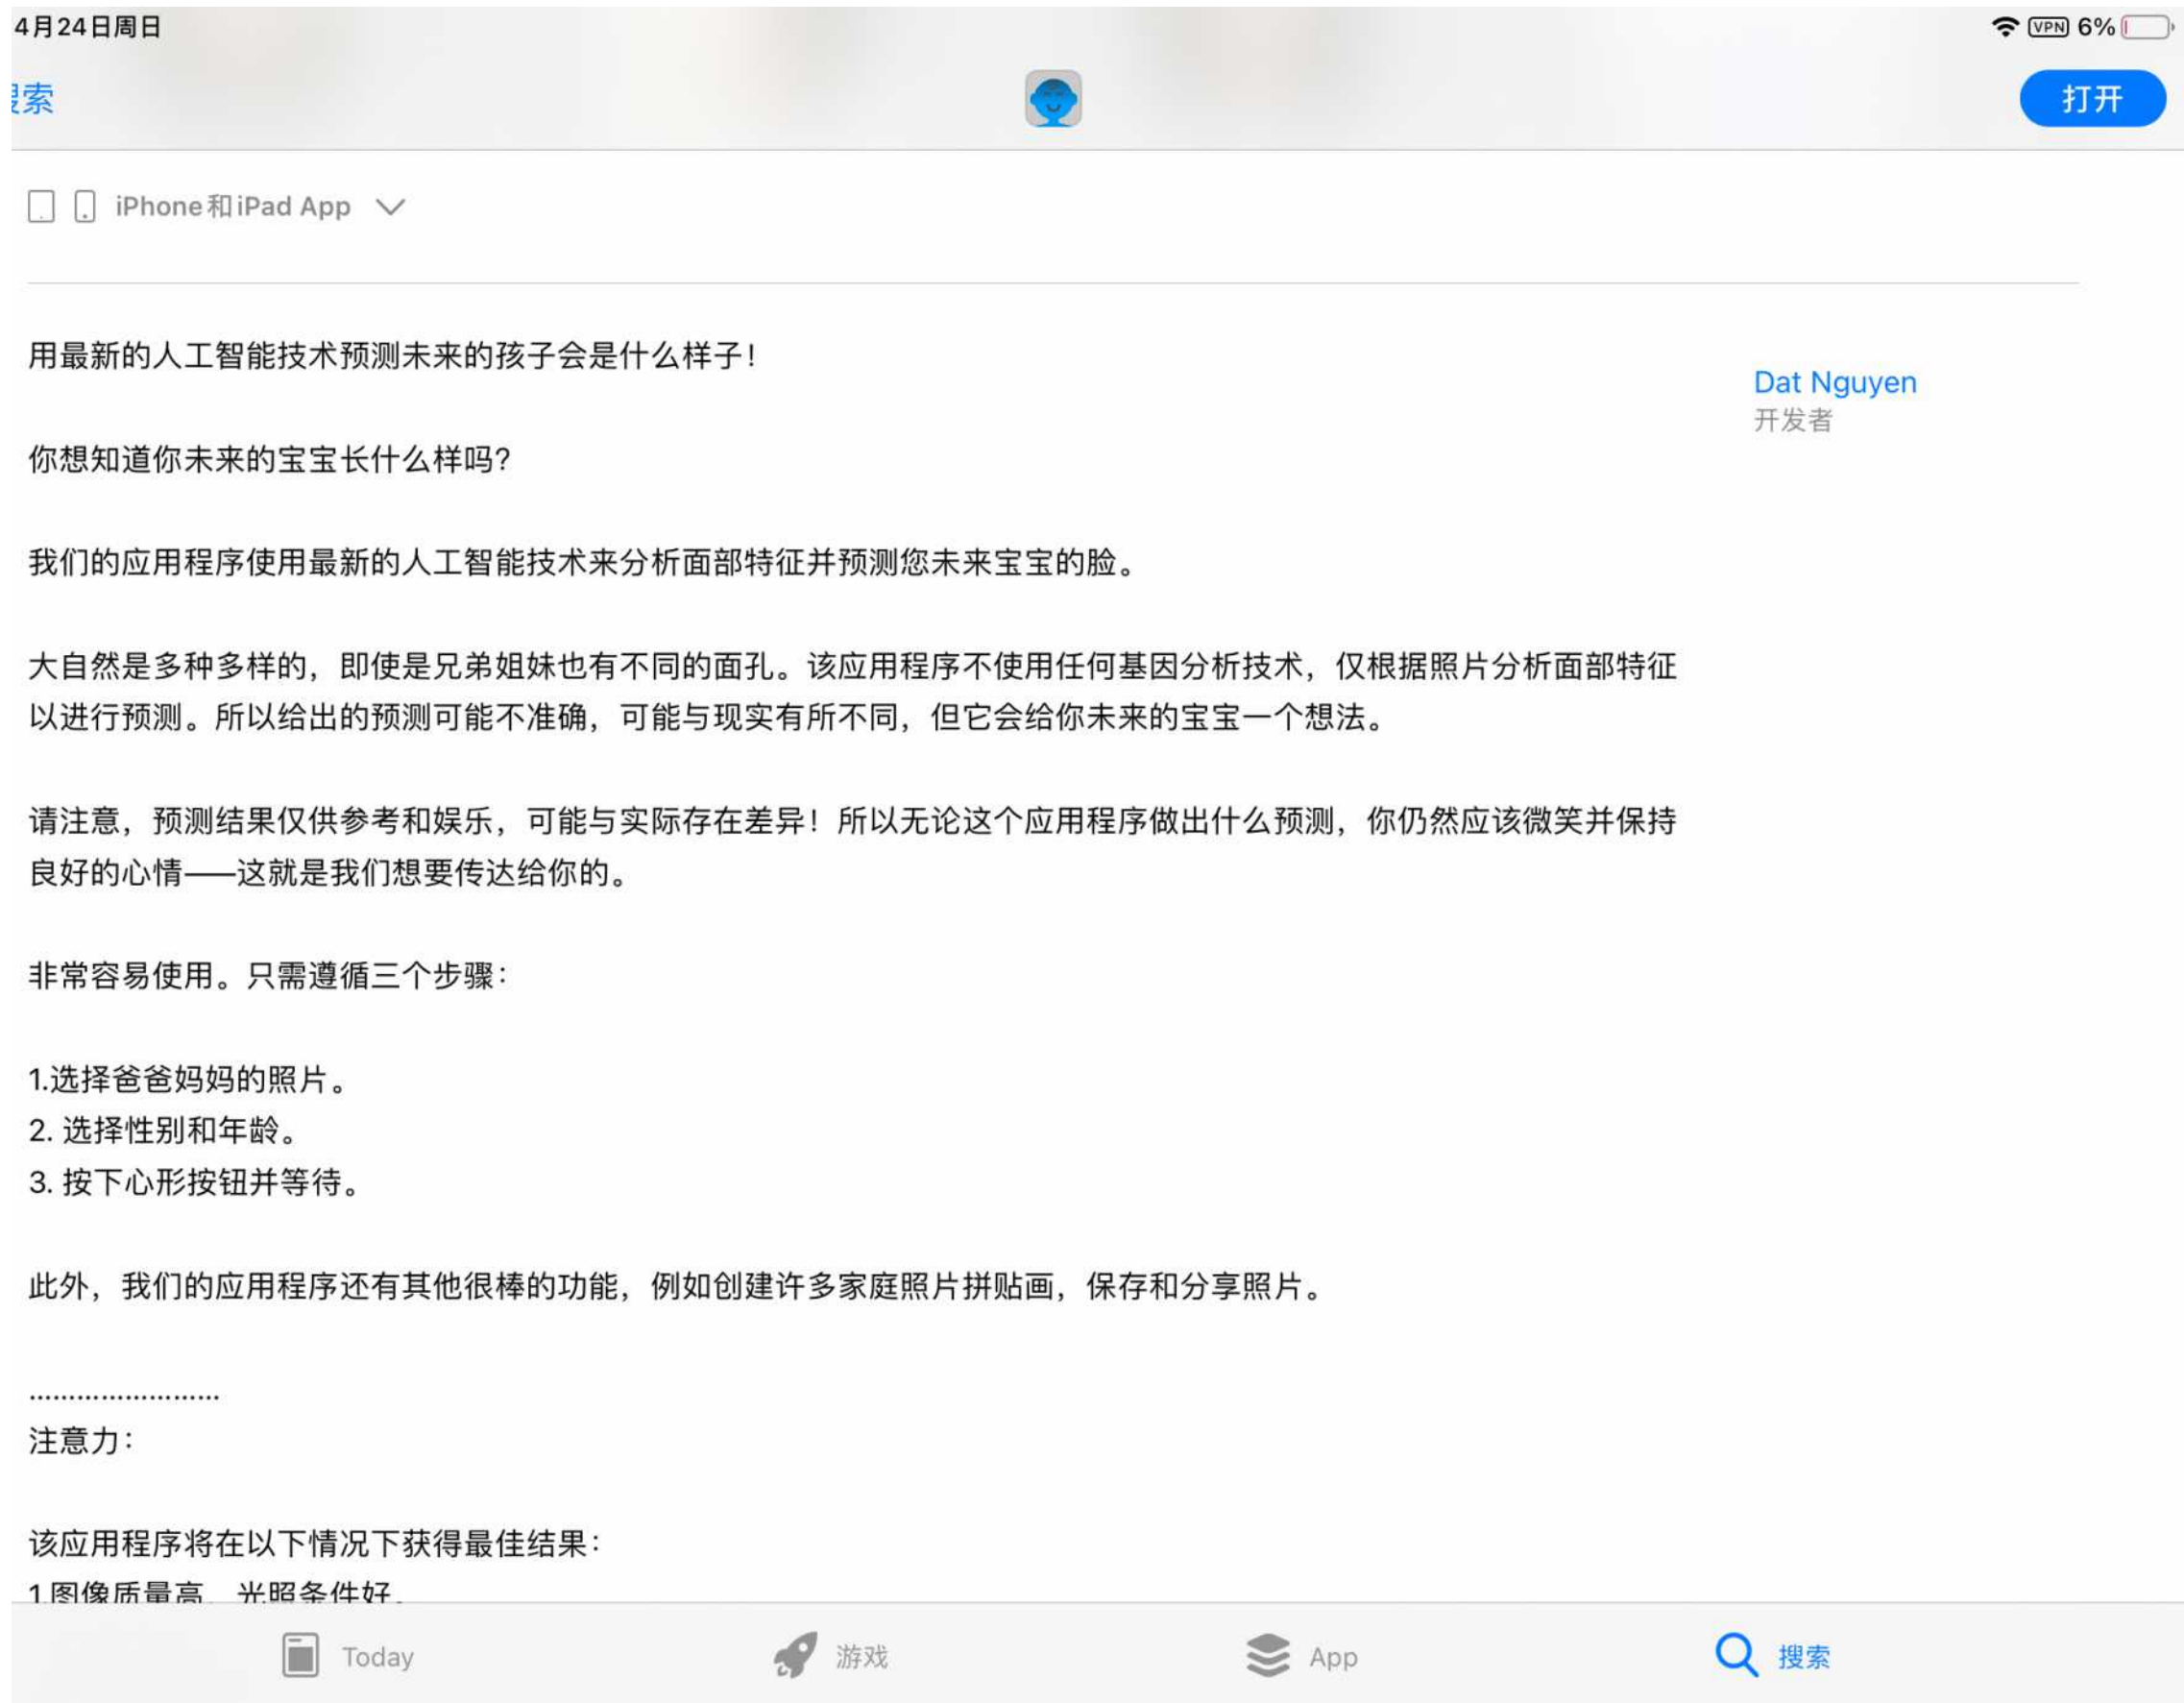

I made a family tree of my own

The individual becomes a collective

Those who bred continued to breed, forming a family

What began as a "cyber-breeding" has now become a colonisation of the web

First of all, I achieved what scientific laws could not achieve with virtual, but only existed in virtual. But now a picture of my ethnic group is displayed in front of me, and I seem to have a kind of emotion. I feel that my ethnic group already exists, and IT seems that I should break the wall between virtual and reality

The developers of the software also say it is a facial recognition technology, not genetic technology

I just can make something that looks like a doll?

My "offspring" are just some images at present, how to turn the images into reality?

The winner of images

Very similar to what I think

Did porn defeat human reproduction?

Porn made some people cum at their digital screen, not for the physical body. Could something that represents the web be made real in a different way?

But if real people and porn are in front of people, I'm afraid real people will be chosen

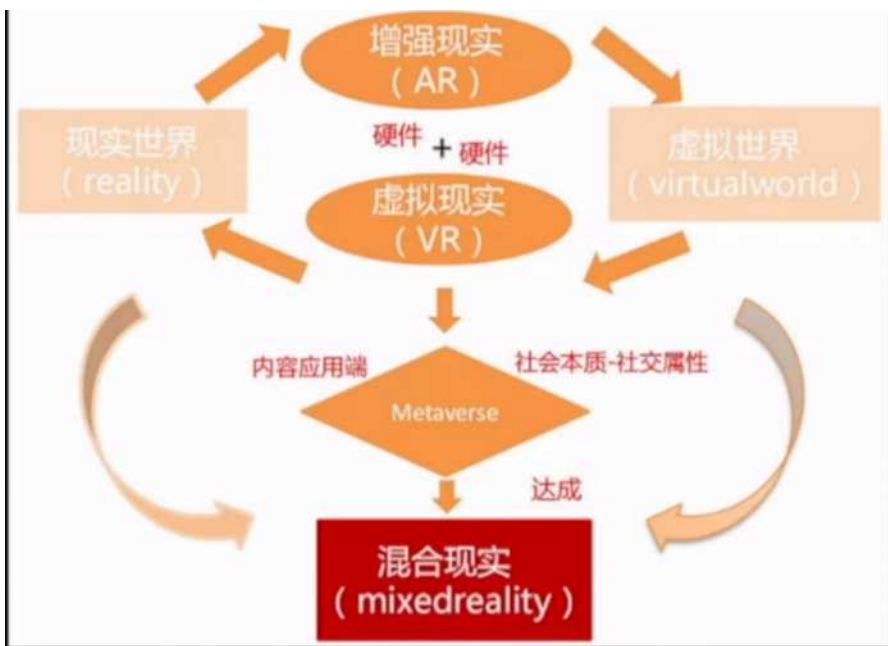

Mataverse

NFT

The metasomes and NFT are like "things in the screen", such as pictures and sounds, that are gradually equivalent to real objects

Like VrChat, Vtuber switches between virtual and real worlds indefinitely

In VrChat and Vtuber, I see people abandoning reality for the virtual, even though they know it's virtual

Will the pictures of my offspring become real and meaningful in this growing trend?

Maybe in the future people will let these images have the human right? Or is it possible that people in the future will see my race as just another human being in the real world?

Keep the present and give it to the future
Time capsule

As early as 1937, people used time capsules to try to preserve objects in the present and put them into the future. What would future people do with them

背景

时间囊可分为两类：“有意类”和“无意类”。有意制作的时间囊通常会放置于计划地点，并会在特定的时间开启。无意形成的时间囊则是自然形成的古物，较有文化象征性的就多于固定考古发掘地点中找出。就好像被维苏威火山爆发所掩蔽的庞贝城。

时间囊这个概念并不是近代才出现的。吉尔伽美什史诗——首人类最早期的文学代表作，在开篇曾记述如何在乌鲁克长城的基石中找出一箱铜币的方法，而那箱中有一块写有吉尔伽美什传说的石碑——这正是一个时间囊。另一时间囊则当成手工制品般藏在美索不达米亚城的一个地窖中。在1992年，一个时间囊被埋藏在力高罗敦工作室的地板，并计划于2042年4月30日开启。但是因为工作室的倒闭，时间囊在2006年8月被移走。那个囊中最有当时深受孩子欢迎之物，其中包括一部任天堂的Game Boy。

在1937年，在准备1939年纽约世界博览会期间，有人提议埋下一个时间囊6000年（即由1937年至6939年），时间囊这个名词便由此而生。1939年在纽约世界博览会中展出了由西屋制造的时间囊，它是西屋展品中的一部分。这时间囊高90寸，重800磅，内部直径长6.5寸。西屋将这由铜合金所制的东西称为“囊”，并坚称它具有钢铁般的硬度。它载有农作物种子、一部显像管、一卷15米长的新闻短片等等。接着在1965年，第二个现代化时间囊被制作出，并被埋在第一个时间囊的北边十尺处。两个时间囊都埋在法拉盛草原可乐娜公园地下50尺，即是联合国大会的举办地。那两个分别在1939年和1965年所制的时间囊都被计划于同年在开启。最后在1965年西屋又再次制作出一个

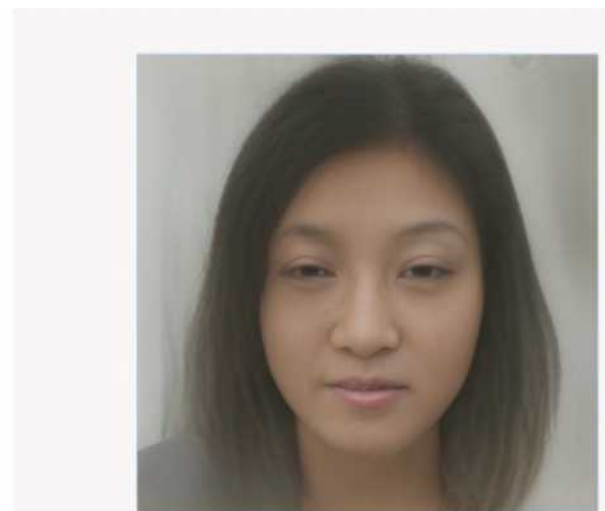

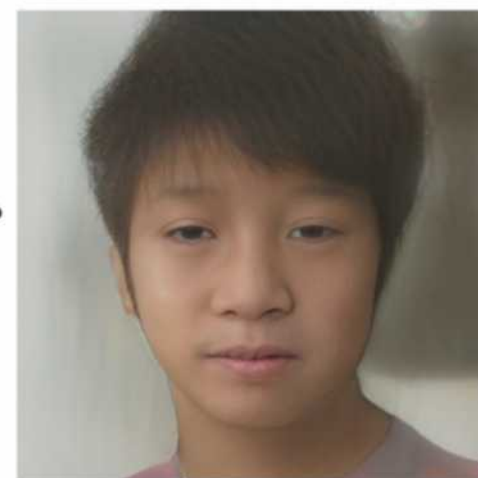

Maybe I can making a time capsule to preserve my offspring

How to tell future generations what this photo means?

I want to tell them

- 1: These are the first two humans of my own race
- 2: With them they can reproduce countless generations, no need for others

Seed of family program

These two images are like the first humans in my family tree , like Adam and Eve

I wanted to preserve both of them, to connect them to the future, like a time capsule

I want to put this seed into the future, let the people of the future help me to plant, then my race will become a reality?

How long will my capsule open in the future?

IDC中国分析师赵思泉在接受《中国电子报》记者采访时表示，游戏和办公领域是比较容易突出面部及动作追踪技术优势的领域。在她看来，在这两个领域，搭载了面部追踪及动作识别技术的产品将很容易凸显其技术优越性，从而使用户最终选择该应用。

袁钰同样认为面部识别技术将是多种立体传感技术中较早取得市场拓展和技术优化的。在他看来，图像识别在安防系统、医学领域存在广阔的应用空间，相比之下，动作识别的市场需求范围就更窄些，将只在设计、游戏、电影、文旅等特定的领域有需求，其需求群体更为小众。

对于硬件厂商而言，提升产品体验感、优化反馈方案是其长期努力的方向。孙凯表示：“高精度、高可靠性和低延迟是产品持续发展的方向，拓展力学振动和触感全链条方向的新应用，将虚拟和现实有机融合在一起，可为终端用户提供更真实、丰富的触感体验。”在产品形态保持不变的情况下，优化现有产品，提升触感精度，本身也是优化用户对虚拟世界立体感知的途径。

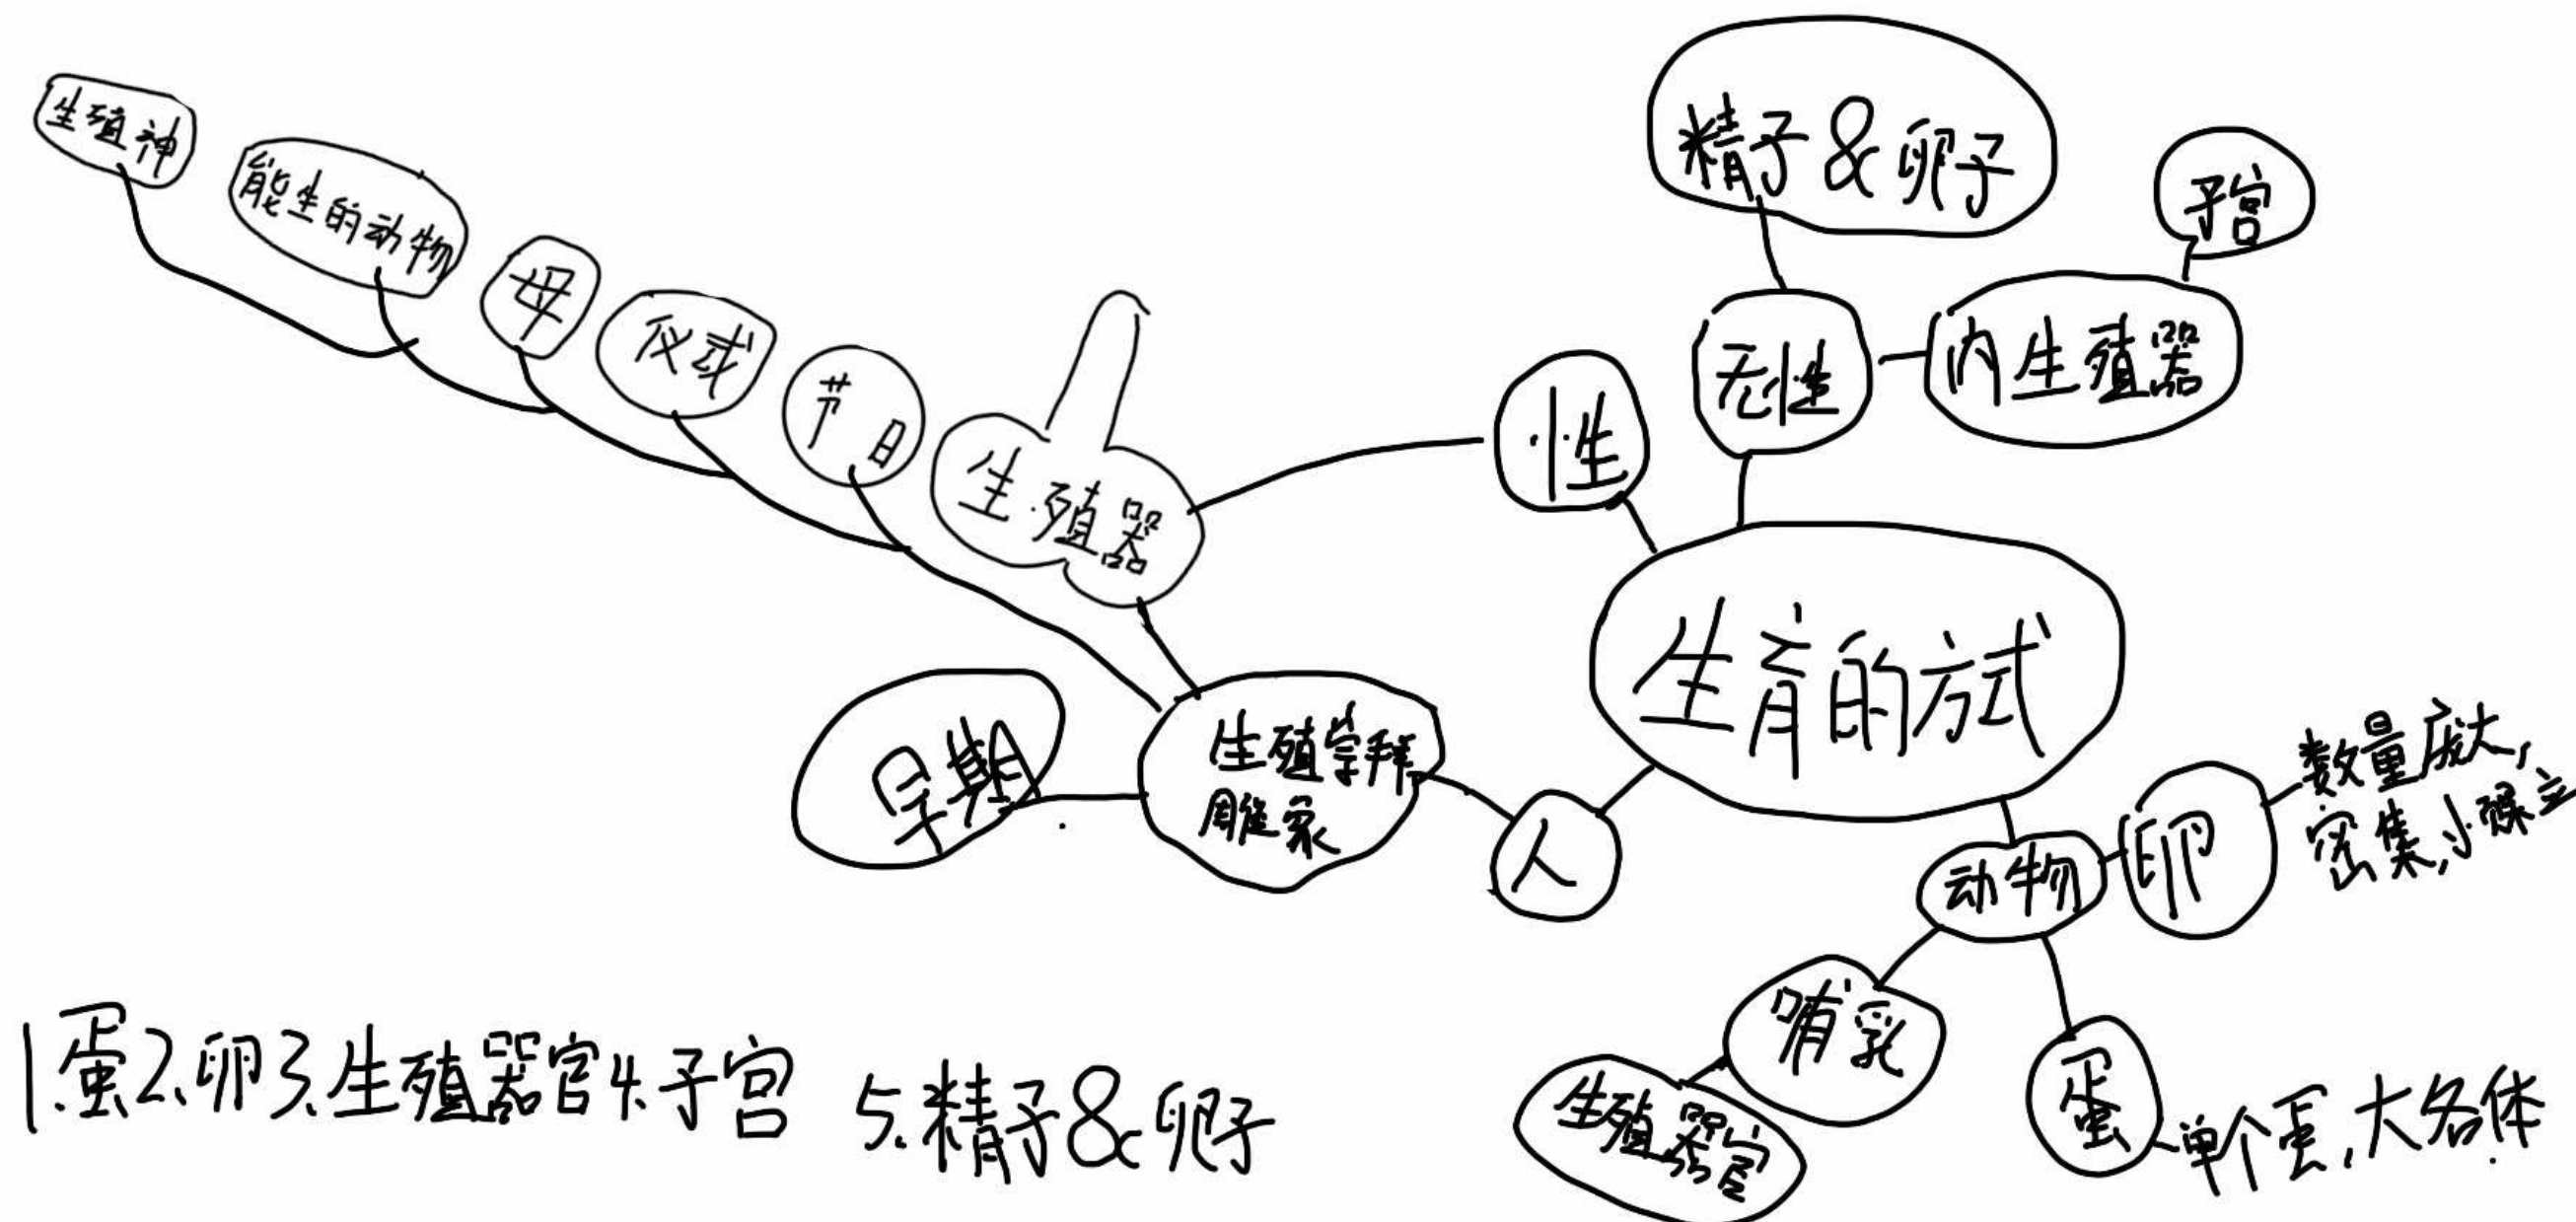

优化产品能够提供的立体传感性能，也是诸多厂商的努力方向。一方面，各厂商在摸索实现更立体、更沉浸式的虚拟世界体验的可能性；另一方面，也有厂商在尝试另辟蹊径。在汪丛青看来，各种类型的传感器都可能存在缺点，或者是佩戴感强，影响沉浸体验；或者是敏感性、反馈力与用户自身感受有所差别。由此，脑机接口或成为增强用户对虚拟世界沉浸感的更高级别传感形态，但汪丛青也表示，这是比完善当前市场现有的立体传感产品更远的技术想象，其技术完善至少还需要10年的时间，在此之前一定有更好的产品形态出来。

和朋友在虚拟世界握手，这一在现实世界中可以轻而易举实现的举动，若要使大多数人都能在元宇宙中立体感知，还有很长的路要走。李杰认为，自现在起到立体传感技术成熟，至少还需要5~10年的时间。袁钰称，若是乐观考虑，要实现用户大批量在虚拟世界进行触觉交互，恐怕还需要10年左右。

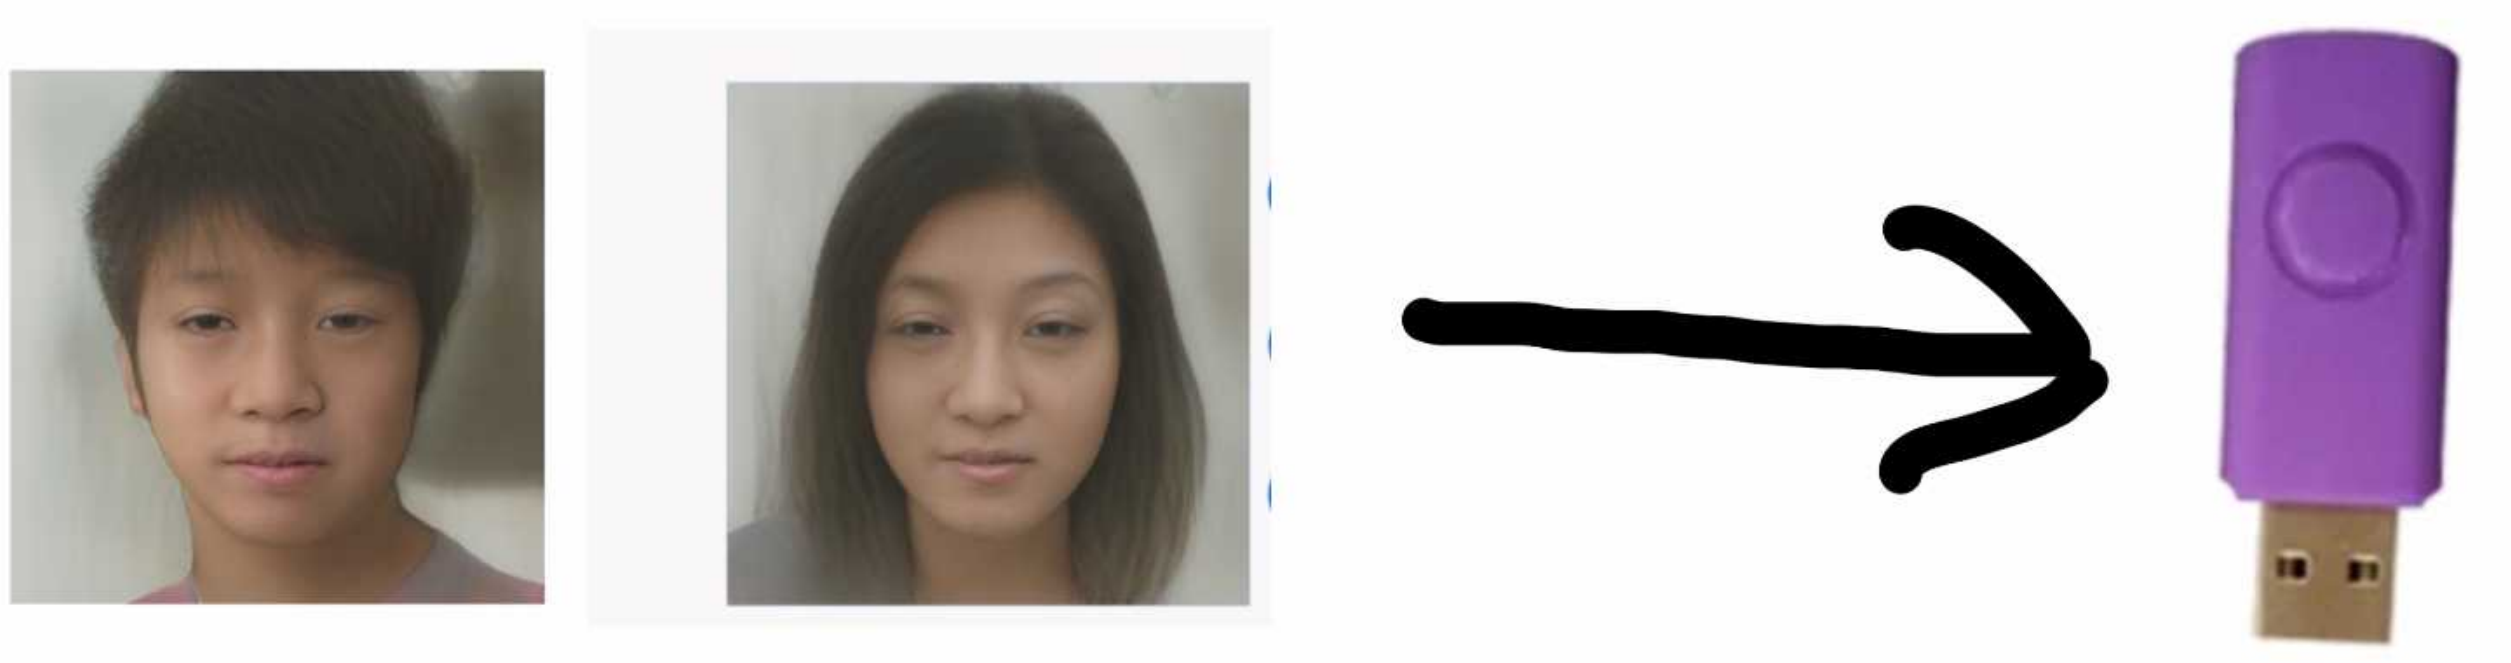

(文章来源：中国电子报)

A report in The China Electronic News said hardware for experiencing virtual worlds is still at least a decade away

I think my tribe needs to be a reality and a change of perception

1.蛋 2.卵 3.生殖器官 4.子宫 5.精子&卵子

I can put two photos on a USB stick, but it doesn't look like a time capsule

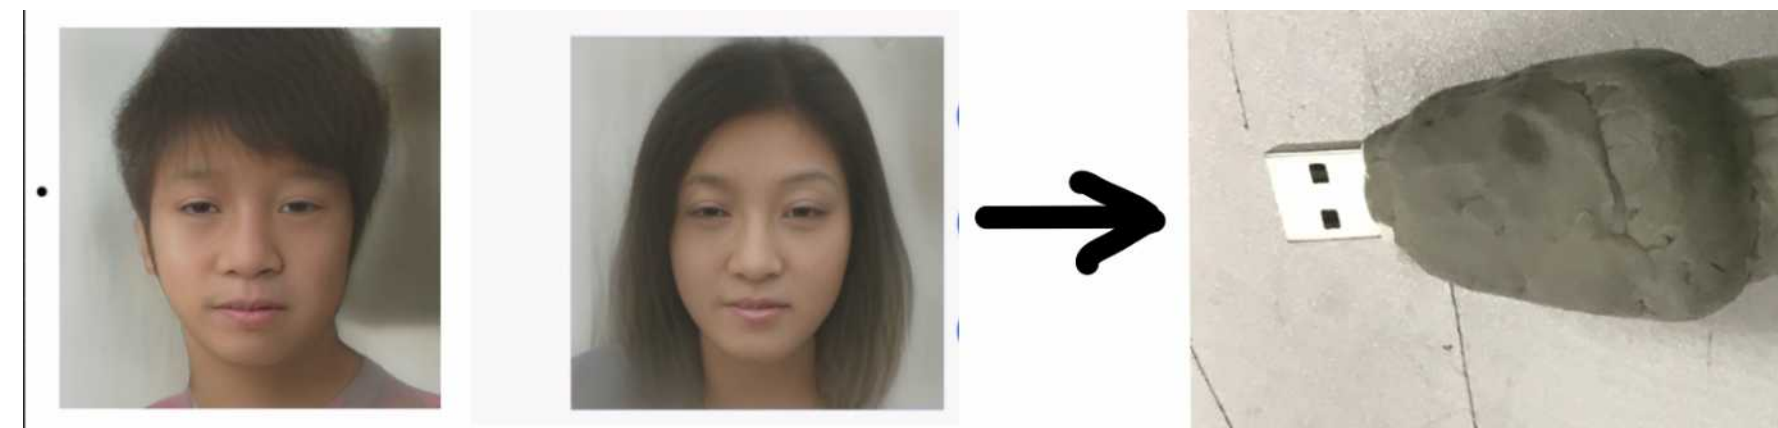

The shape of the time capsule might help future generations understand what I was thinking. If it was just a USB stick, it might be thrown away

How to let flash drive become the time capsule ?

I can put two photos on a flash drive , but it doesn't look like a time capsule,

My time capsule is estimated to open in 25 years

Output 1: Flash drive combined with reproduction worship sculpture

The images of the two men are stored on this flash drive

I made the SHAPE of the USB stick into the shape of genitals, just like the primitive human worship of reproduction

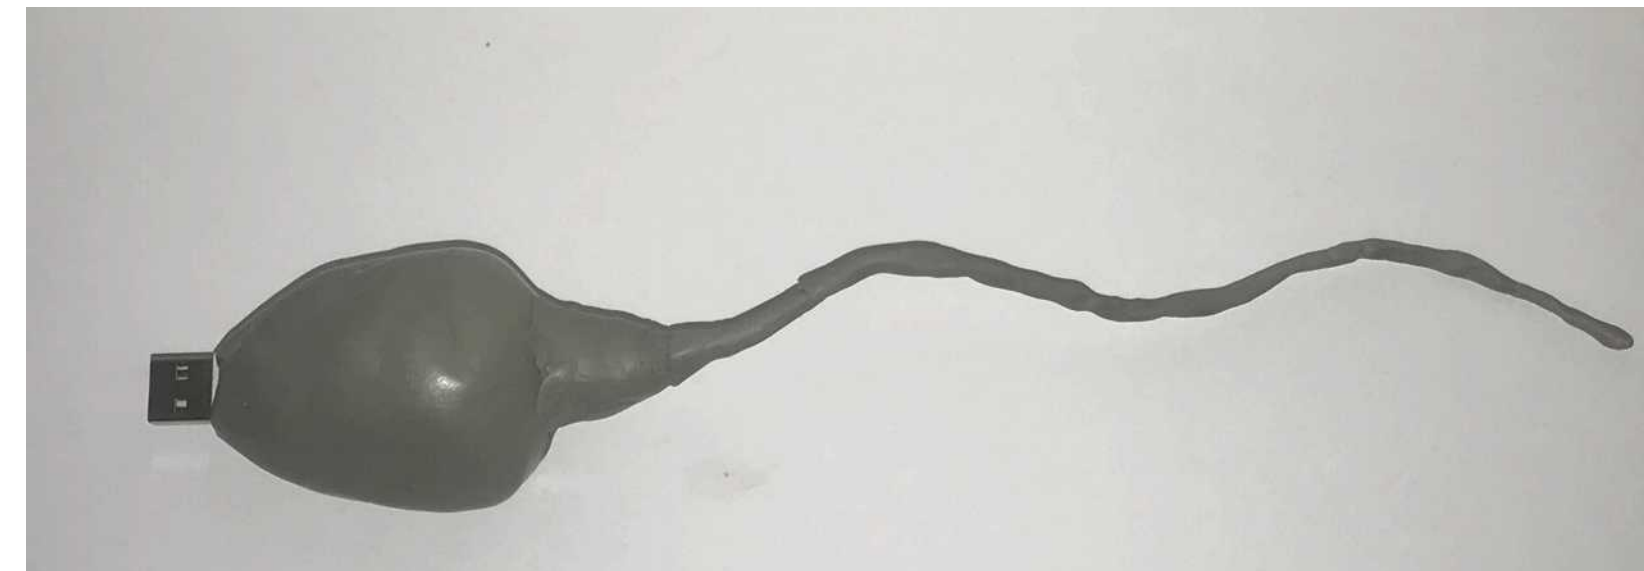

I think of my seed project as a fertility cult looking forward to the future. Can I tell people what I want from the shape of my genitals?

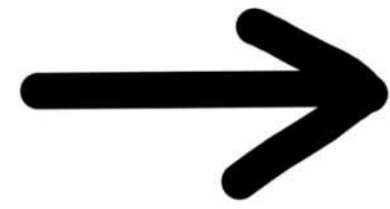

defect

The downside is that modern people might think of genitalia as sex, not reproduction. What if the seeds of my tribe are used for sex by future generations

Output 2: Sperm time capsule and ovum time capsule

I used putty to change the shape of two usb sticks into sperm and ovum

Sperm flash drives store the males of my generation

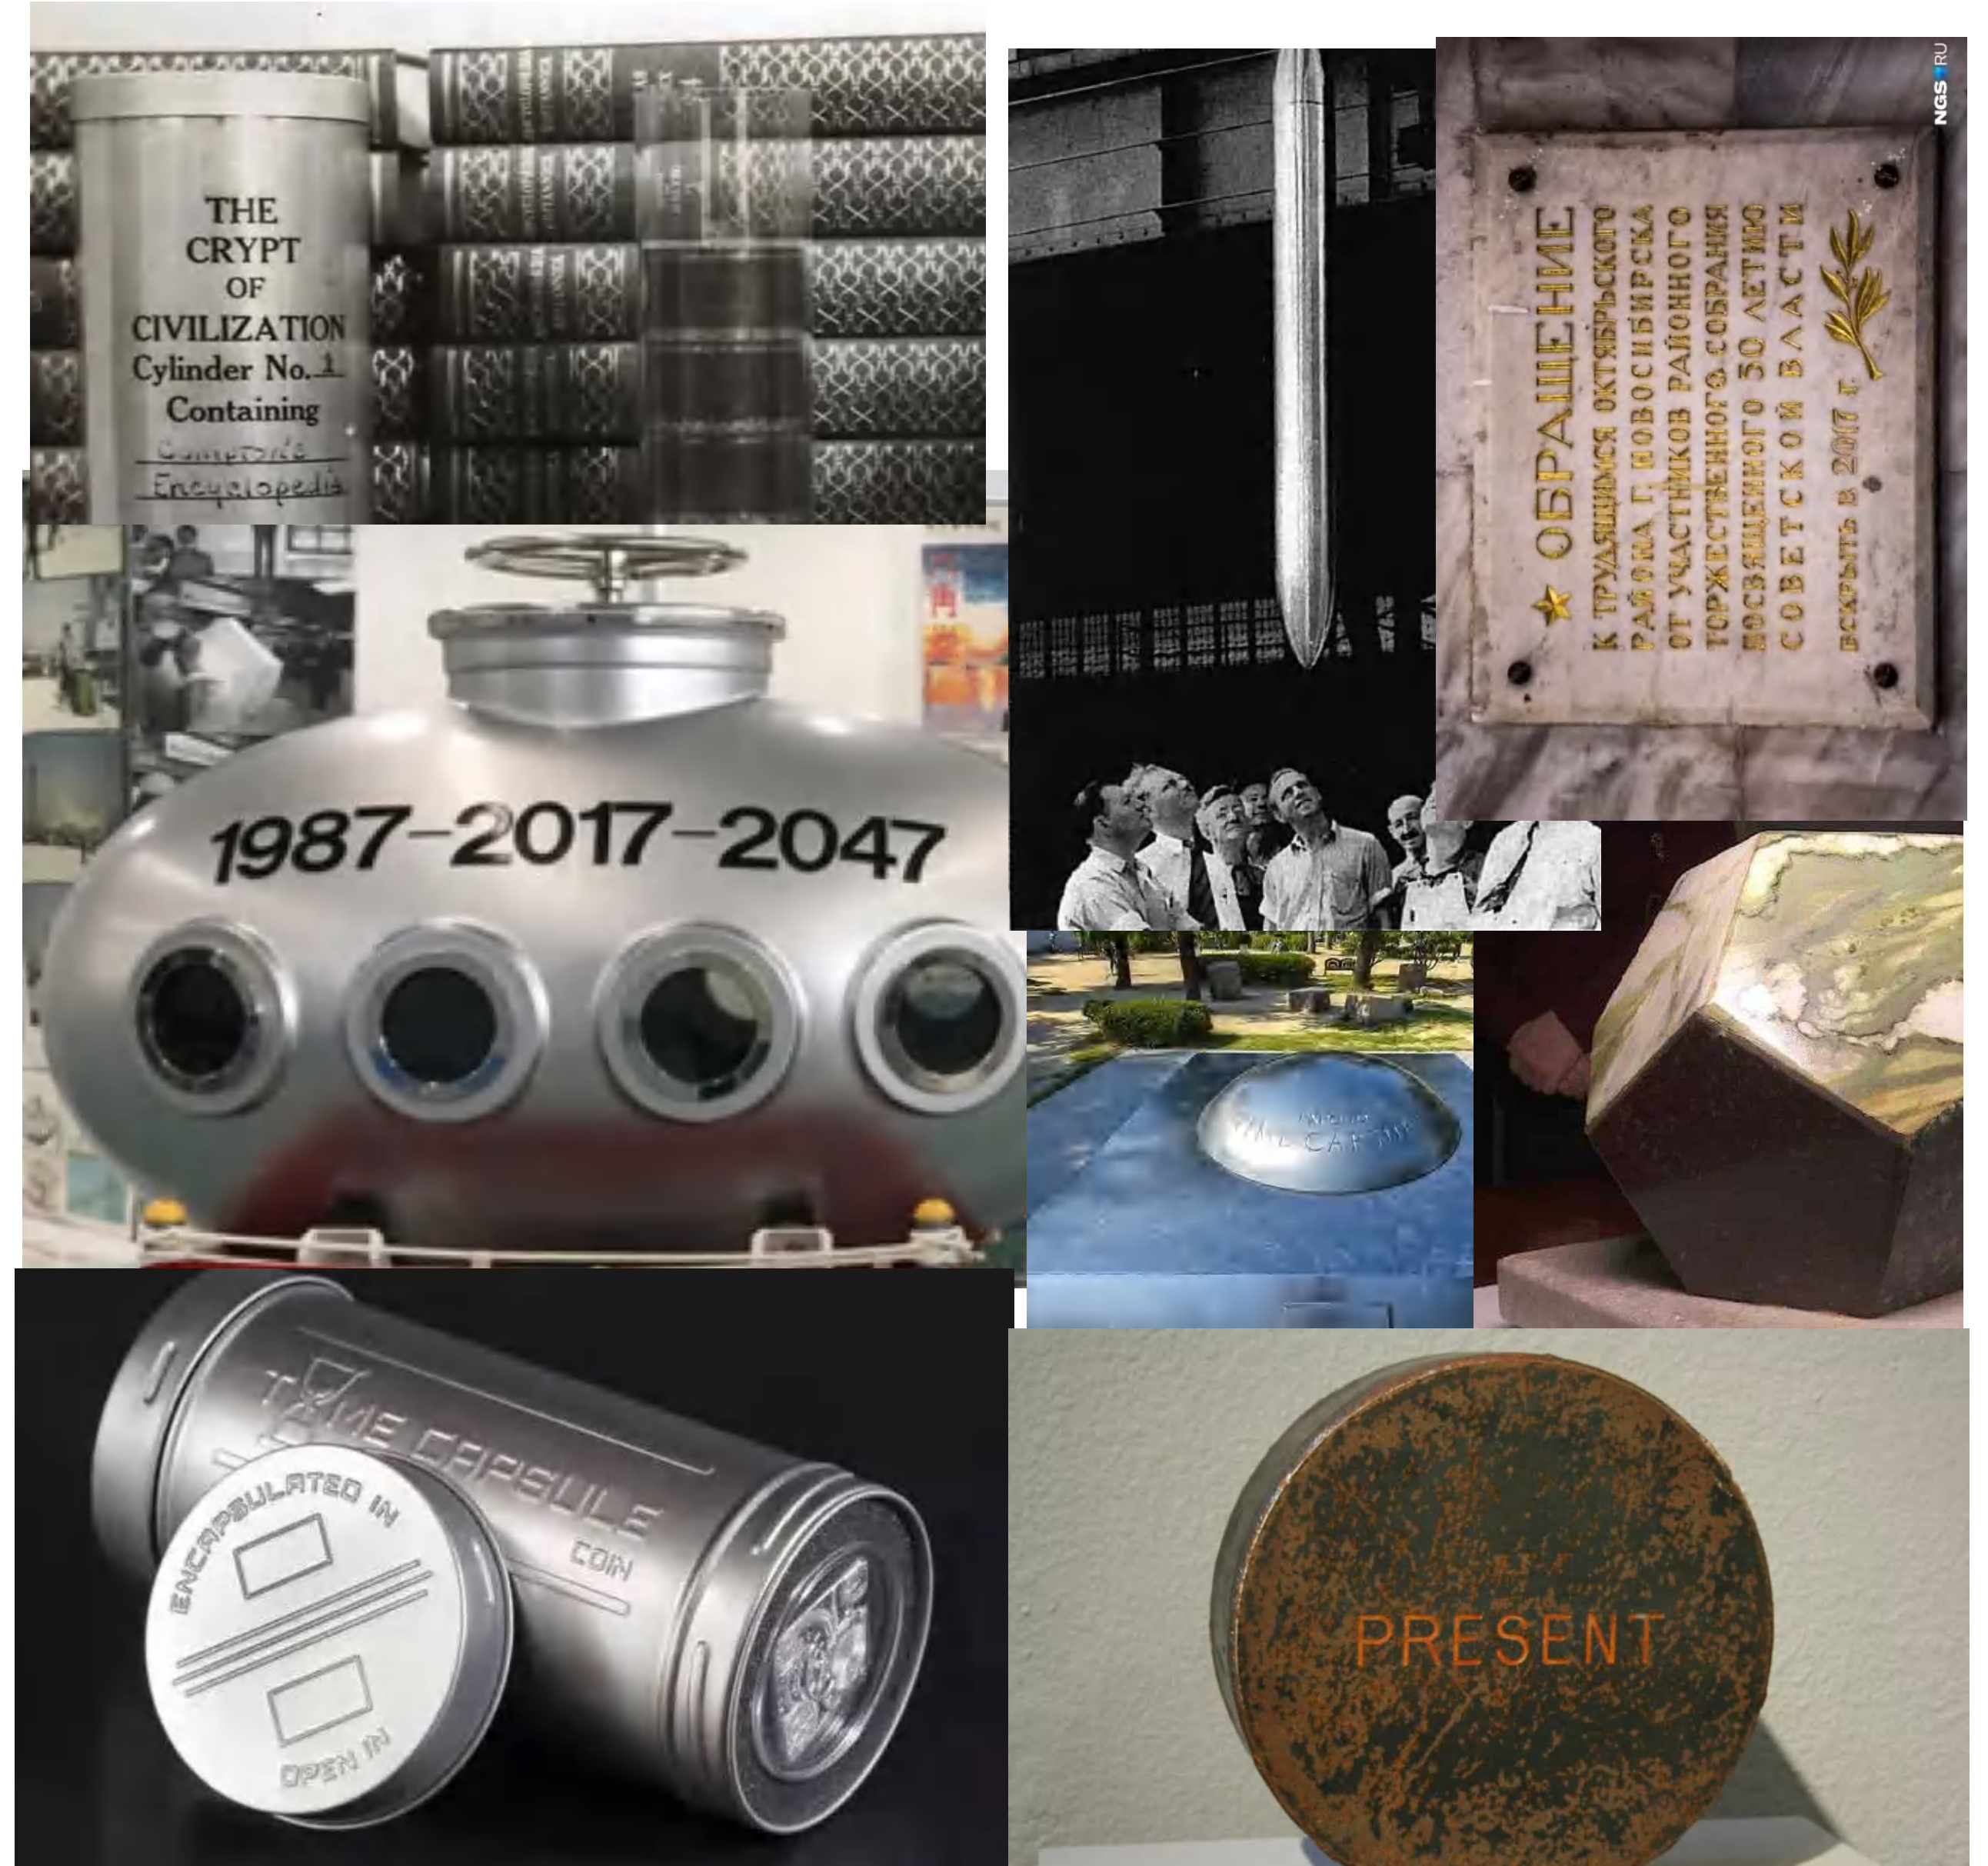

The ovum flash drive stores the female

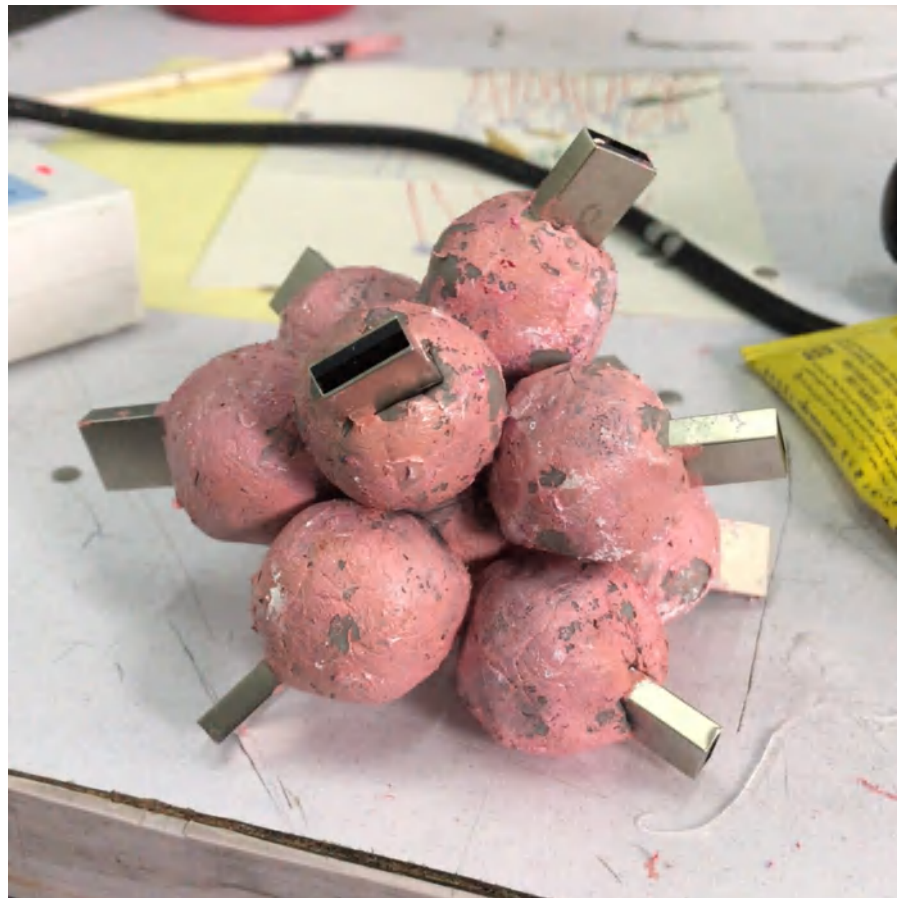

Does this desexualized, sculpture-shaped flash drive clearly tell future generations that the two "people" in my flash drive are used for procreation?

I checked the appearance of time capsules in the past and found that most of them were metal, because metal can be preserved for a very long time

Visual inspiration

Should my time capsule be metallic?

i think only one sperm cannot let people to help me extend my family tree,so I making U 盘 to all people in my family tree.

I think my time capsule doesn't have to look like having a iron material because I do not preserve long time. Maybe I can let the 「sperm flash drive」 having the white color, 「ovum flash drive 」 have the pink color. Just like their original color.

Final display:Seeds
