

Asthma

I created the project Asthma, closely related to my personal experiences as a girl who has had bronchial asthma for over ten years. To convey an feeling of suffocation during an asthma attack, I adopt plastic materials in my work. As to the color design, I have brightened the blue and purple from the asthma spray carried with me and the red from the human respiratory organs to give a sense of warmth and healing. Asthma attack never gives me a pleasant feeling, but through this project, I hope to help people understand this disease and, more importantly, encourage people who suffer from asthma to keep optimistic toward their life even though the disease is incurable currently.

体格检查: 一般情况尚可, 专科检查: 以上副鼻窦片未见异常, 舌苔...

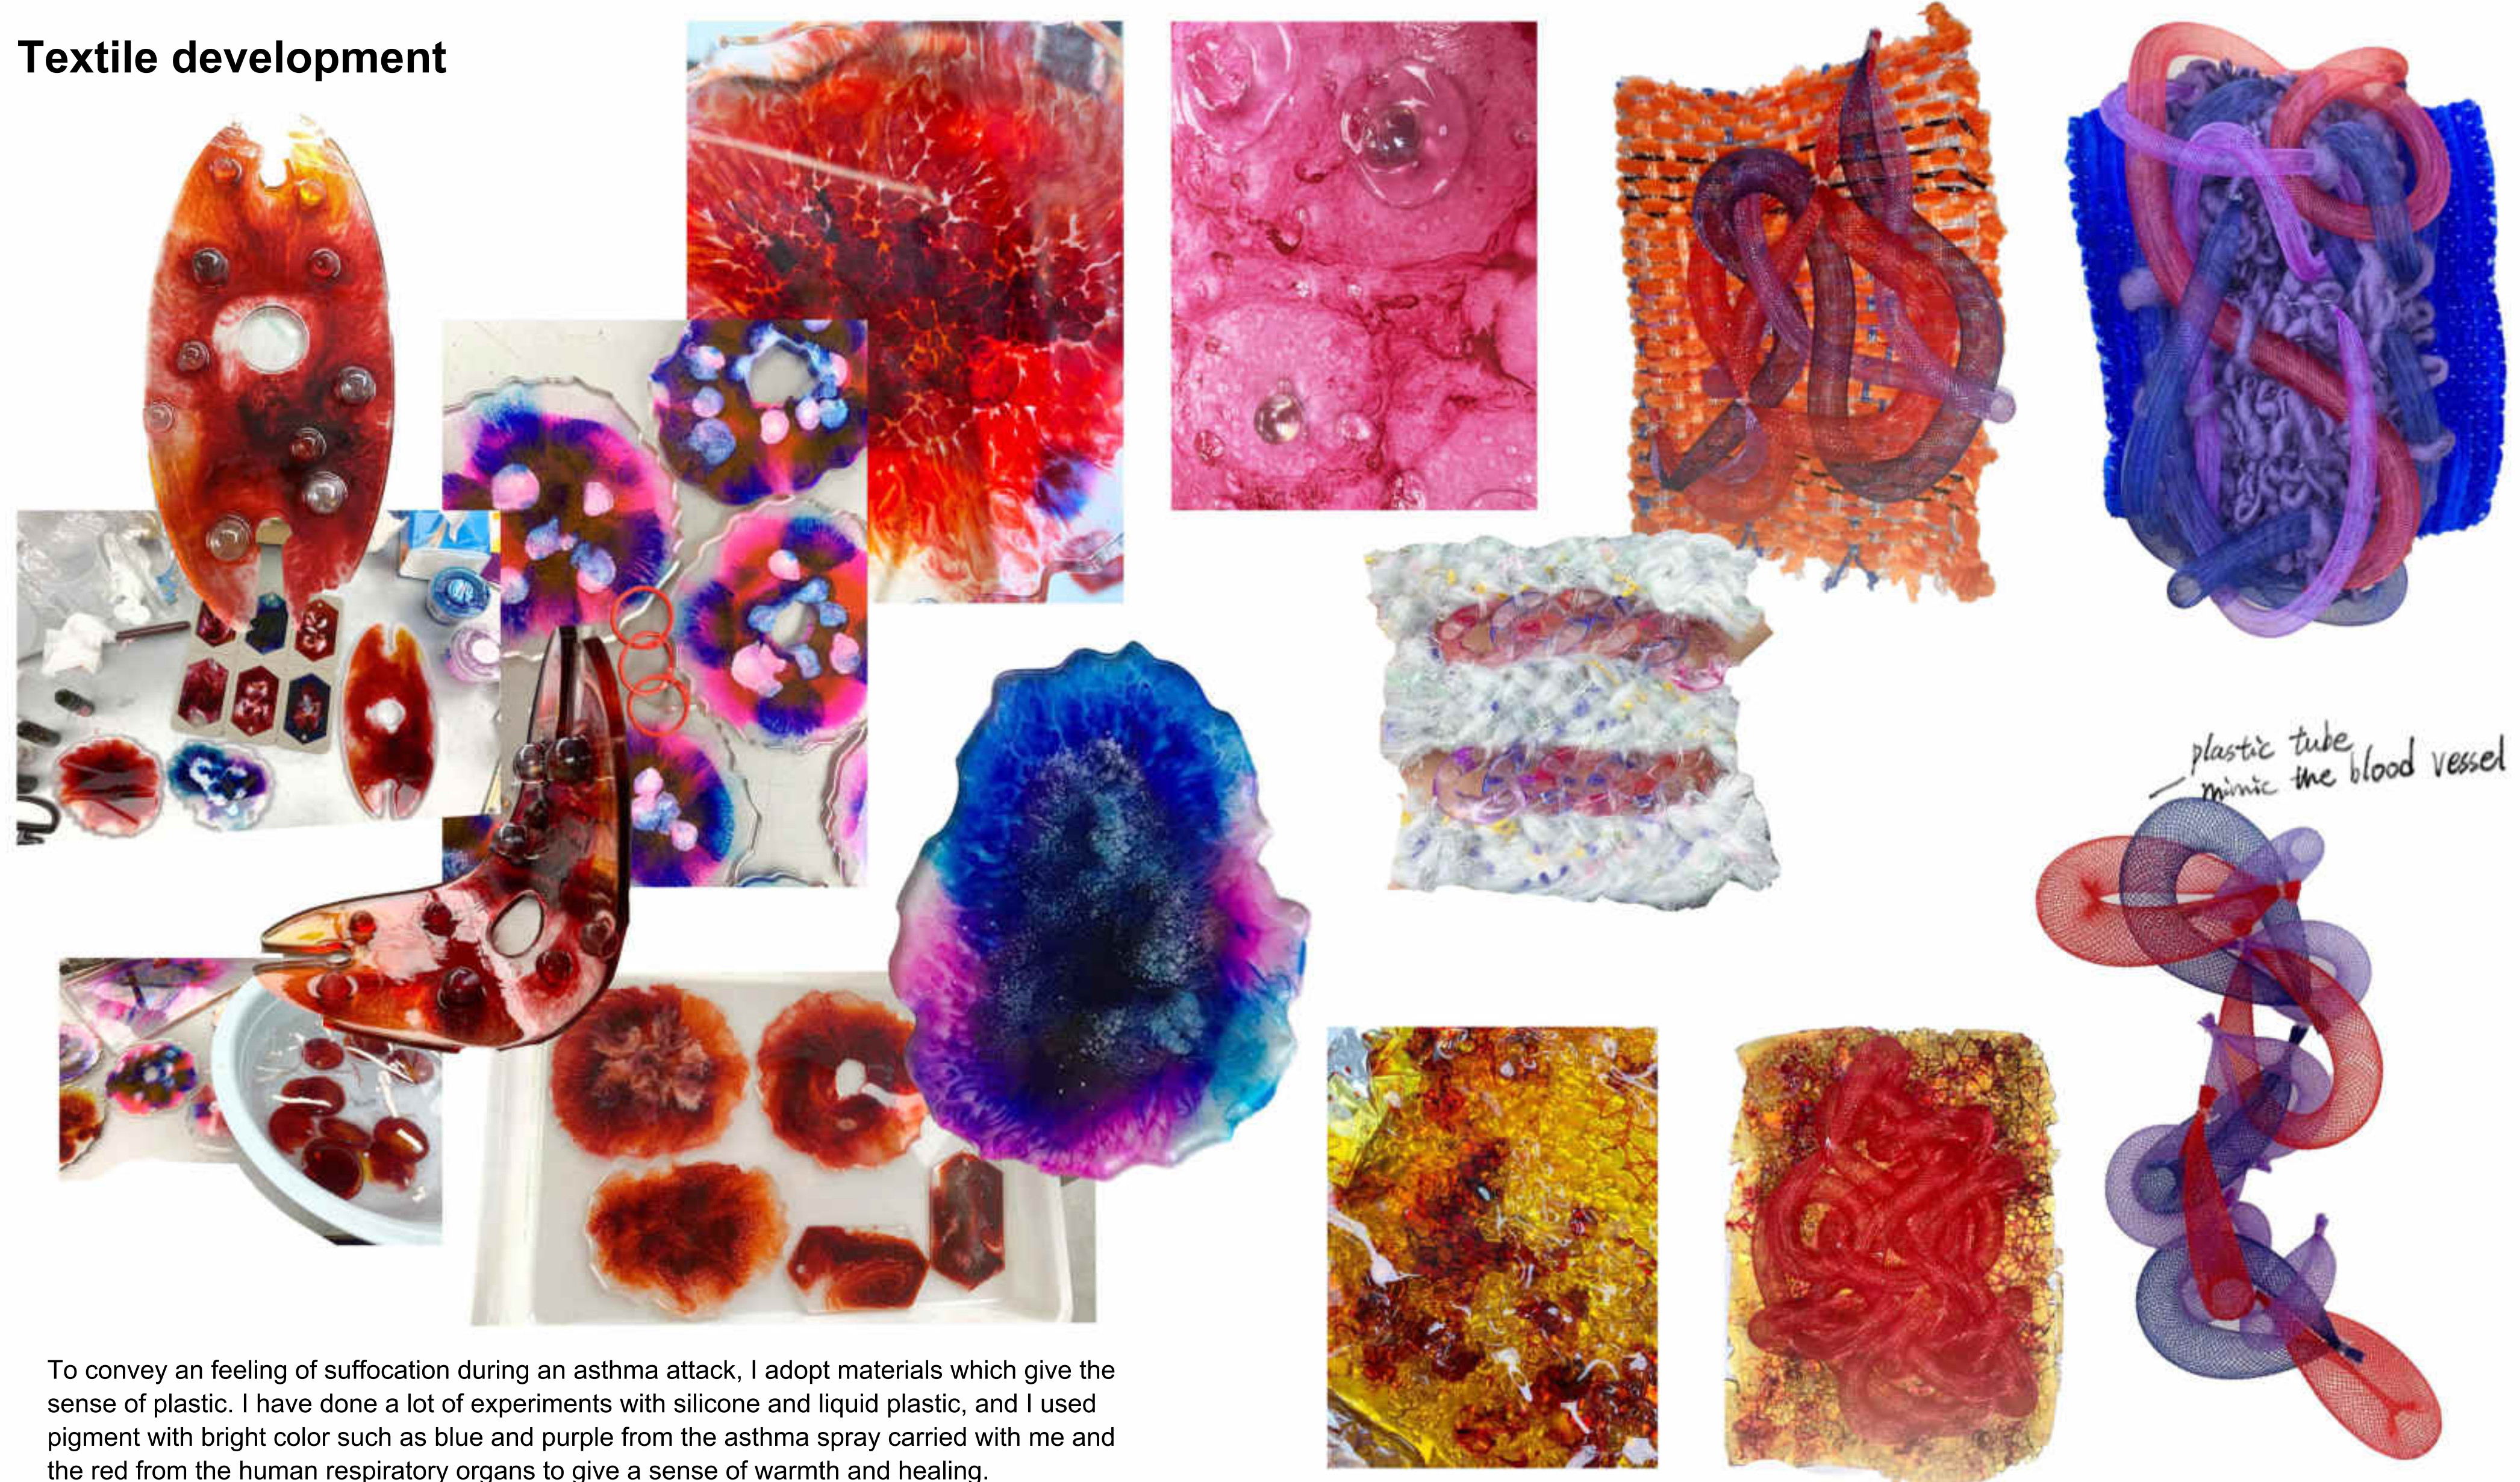

When I was suffering from asthma, my vision became whimsical, it feels like there were a lot of dots and curls in my world, I created some illustration to show what I saw.

Textile development

To convey an feeling of suffocation during an asthma attack, I adopt materials which give the sense of plastic. I have done a lot of experiments with silicone and liquid plastic, and I used pigment with bright color such as blue and purple from the asthma spray carried with me and the red from the human respiratory organs to give a sense of warmth and healing.

Weaving with plastic thread and chain, which convey an feeling of suffocation.
